Section I: General Information

1 About this Manual

1.1 Intended Audience
This manual is intended for use by end users of the refrigerator and authorized service technicians.

1.2 Model References
Generic references are used throughout this manual to group models that contain similar features. For example, “125 models” refers to all models of that size (iB125, HB125, iHB125, HHB125, iLR125, HLR125, iPR125, HPR125). This manual covers all upright refrigerators, which may be identified singly, by their size, or by their respective “Series.”

1.3 Copyright and Trademark
Helmer®, i.Series®, i.Center®, Horizon Series™, and Rel.i™ are registered trademarks or trademarks of Helmer, Inc. in the United States of America. Copyright © 2014 Helmer, Inc. All other trademarks and registered trademarks are the property of their respective owners.

2 Safety
The operator or technician performing maintenance or service on Helmer Scientific products must (a) inspect the product for abnormal wear and damage, (b) choose a repair procedure which will not endanger his/her safety, the safety of others, the product, or the safe operation of the product, and (c) fully inspect and test the product to ensure the maintenance or service has been performed properly.

2.1 Safety Definitions
The following general safety alerts appear with all safety statements within this manual. Read and abide by the safety statement that accompanies the safety alert symbol.

- **WARNING** The safety statement that follows this safety alert symbol indicates a hazardous situation which, if not avoided, could result in serious injury.

- **CAUTION** The safety statement that follows this safety alert symbol indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

- **NOTICE** The safety statement that follows this safety alert symbol indicates a situation which, if not avoided, could result in damage to the product or stored inventory.
2.2 Product Labels

Caution: Risk of damage to equipment or danger to operator

Caution: Unlock all casters

Caution: Hot surface

Earth / ground terminal

Caution: Shock/electrical hazard

Protective earth / ground terminal

2.3 Avoiding Injury

► Review safety instructions before installing, using, or maintaining the equipment.
► Before moving unit, ensure door(s) is closed and casters are unlocked and free of debris.
► Before moving unit, disconnect the AC power cord and secure the cord.
► Never physically restrict any moving component.
► Avoid removing electrical service panels and access panels unless so instructed.
► Keep hands away from pinch points when closing the door.
► Avoid sharp edges when working inside the electrical compartment and refrigeration compartment.
► Ensure biological materials are stored at recommended temperatures determined by standards, literature, or good laboratory practices.
► Proceed with caution when adding and removing samples from the refrigerator.
► Use supplied power cord only.
► Using the equipment in a manner not specified by Helmer Scientific may impair the protection provided by the equipment.
► Decontaminate parts prior to sending for service or repair. Contact Helmer Scientific or your distributor for decontamination instructions and a Return Authorization Number.
► Ensure biological materials are stored safely, in accordance with all applicable organizational, regulatory, and legal requirements.
► The refrigerator is not considered to be a storage cabinet for flammable or hazardous materials.
3 Configuration

3.1 Model and Input Power

NOTE  Service information varies depending on the model and power requirements.

This information appears on the product specification label, located on the rear of the refrigerator. The model also appears on a label located in the chamber on the upper side of the right wall.

Left: Chamber label.  Right: Product specification label (located on the rear at lower left).

</tbody>
</table>

3.2 Control System

NOTE  Service information varies depending on the control system.

Helmer refrigerators have one of three control systems installed.  The type of control system varies by model.
3.2.1 i.Series Monitoring System and Independent Temperature Controller

**NOTE**
This section applies to iB, iHB, iLR, and iPR models.

i.Series refrigerators are equipped with the i.Center monitoring system and independent temperature controller.

![i.Center monitor.](image)

![Independent temperature controller.](image)

3.2.2 Horizon Series Blood Bank Monitoring System and Independent Temperature Controller

Horizon Series blood bank refrigerators are equipped with the Horizon monitoring system and independent temperature controller.

**NOTE**
This section applies to HB models.

![Horizon monitor.](image)

![Independent temperature controller.](image)
3.2.3 **Horizon Series Laboratory Monitoring and Control System**

**NOTE**  This section applies to HPR, HLR, and HHB models.

Horizon Series laboratory and pharmacy refrigerators, and international Horizon Series blood bank refrigerators are equipped with the laboratory monitor and temperature controller. The combined laboratory system controls chamber temperature and monitors and displays operational information.

![Laboratory monitoring and control system.](image)

**3.3 Temperature Probes**

Number and location of probes varies by model. External probes may be introduced through existing top port and immersed in existing probe bottle.

**NOTE**  Probes may also be introduced through the side port (side port availability varies, depending on model).

**For each probe bottle, use:**

- Approximately 4 oz. (120 mL) of product simulation solution (10:1 ratio of water to glycerin).

![Probe bottle with temperature probe. Center: Access port as seen from top of refrigerator. Right: Access port as seen from side of refrigerator.](image)
3.3.1 Fill Temperature Probe Bottle

**NOTICE** Temperature probes are fragile; handle with care.

1. Remove all probes from bottle and remove bottle from bracket.
2. Remove cap and fill with approximately 4 oz. (120 mL) of product simulation solution.
3. Install cap and place bottle in bracket.
4. Replace probes, immersing at least 2” (50 mm) in solution.

3.3.2 Install Additional Probe Through Top Port

1. Peel back putty to expose port.
2. Insert probe through port into chamber.
3. Insert probe into bottle.
4. Replace putty, ensuring a tight seal.

3.3.3 Install Additional Probe Through Side Port

1. Remove the interior and exterior plugs to expose the side access port.
2. Insert probe through port into chamber.
3. Insert probe into bottle.
4. Replace plugs, ensuring a tight seal.

3.4 Internal Outlet

If installed, this duplex outlet, with vapor-proof cover and a GFCI (ground fault circuit interrupter), provides a power source for operating devices inside refrigerator.

![Internal duplex outlet](image)

**CAUTION**

- The internal outlet is rated for 115 V, 15 A. Do not plug any device into these outlets that exceeds this rating.
- Test the GFCI periodically to ensure proper, safe operation.

3.5 Chart Recorder

If installed, refer to the Temperature Chart Recorder Operation and Service Manual on CD.

The chart recorder has a battery system, enabling a period of continuous operation if power is lost. Battery life varies by manufacturer as well as voltage level remaining. Providing full power is available, backup power for the temperature chart recorder is available for up to 14 hours.

**Prior to use:**

- Connect the chart recorder to AC power.
- Install battery.
- Add paper.
- Install the chart recorder probe in the probe bottle, through the top port.
- Calibrate chart recorder to match chamber temperature.
3.5.1 Chart Recorder Access

► iB, iLR, iPR models (except 111): Open door by pressing and releasing it.
► HB, iHB, HHB, HLR, HPR models (and all 111 models): Pull door open.

3.5.2 Install Chart Paper

1. Press and hold C button. When stylus begins to move left, release button. The LED flashes to indicate current temperature range.
2. When stylus stops moving, remove chart knob then move knob up and away.
3. Place chart paper on chart recorder.
4. Gently lift stylus and rotate paper so current time line corresponds to time line groove.
5. Hold chart paper and reinstall chart knob.

**NOTE** For accurate temperature reading, ensure that current time is aligned with time line groove when chart knob is tightened.
6. Confirm temperature range is set to the correct value.
7. Press and hold C button. When stylus begins to move right, release button.
8. Confirm stylus is marking temperature correctly.
4 Alarm Reference

If an alarm condition is met, an alarm activates. Some alarms are visual only; others are visual and audible. Some alarms are sent through the remote alarm interface.

The table indicates if an alarm is audible (A), visual (V), or sent through the remote alarm interface (R).

<table>

5 Compliance

5.1 Regulatory Compliance

This device complies with the requirements of directive 93/42/EEC concerning Medical Devices, as amended by 2007/47/EC.

Sound level is less than 70 dB(A).

Emergo Europe
Molenstraat 15
2513 BH
The Hague, Netherlands

5.2 WEEE Compliance

The WEEE (waste electrical and electronic equipment) symbol (right) indicates compliance with European Union Directive WEEE 2002/96/EC and applicable provisions. The directive sets requirements for labeling and disposal of certain products in affected countries.

When disposing of this product in countries affected by this directive:

► Do not dispose of this product as unsorted municipal waste.
► Collect this product separately.
► Use collection and return systems available locally.

For more information on the return, recovery, or recycling of this product, contact your local distributor.
6 Warranty

6.1 Rel.i™ Product Warranty USA and Canada
For technical service needs, please contact Helmer at 800-743-5637 or www.helmerinc.com. Have the model and serial number available when calling.

6.1.1 Rapid Resolution
When a warranty issue arises it is our desire to respond quickly and appropriately. The service department at Helmer is there for you. Helmer will oversee the handling of your warranty service from start to finish. Therefore, Helmer must give advance authorization for all service calls and/or parts needs relating to a warranty issue. Any repeat service calls must also be authorized as well. This allows for proper diagnosis and action. Helmer will not be responsible for charges incurred for service calls made by third parties prior to authorization from Helmer. Helmer retains the right to replace any product in lieu of servicing it in the field.

6.1.2 Compressor
For the warranty period listed below, Helmer will supply the refrigeration compressor, if it is determined to be defective, at no charge, including freight. Helmer will not be liable for installation, refrigerant, or miscellaneous charges required to install the compressor beyond the first year of the warranty period.
► i.Series model compressor warranty period is seven (7) years.
► Horizon Series model compressor warranty period is five (5) years.

6.1.3 Parts
For a period of two (2) years, Helmer will supply at no charge, including freight, any part that fails due to defects in material or workmanship under normal use, with the exception of expendable items. Expendable items such as glass, filters, light bulbs, and door gaskets are excluded from this warranty coverage. Inspection of defective parts by Helmer will be final in determining warranty status. Warranty procedures must be followed in all events.

6.1.4 Labor
For a period of one (1) year, Helmer will cover repair labor costs (including travel) and the cost of refrigerant and supplies necessary to perform authorized repairs. Repair service must be performed by an authorized Helmer service agency following the authorization process detailed above. Alternatively, your facility’s staff may work with a Helmer technician to make repairs. Labor costs for repairs made by unauthorized service personnel, or without the assistance of a Helmer technician, will be the responsibility of the end user.

6.1.5 Additional Warranty Information
The time periods set forth above begin two (2) weeks after the original date of shipment from Helmer. Warranty procedures set forth above must be followed in all events.

THERE ARE NO WARRANTIES WHICH EXTEND BEYOND THE DESCRIPTION ON THE FACE HEREOF. THIS WARRANTY IS EXCLUSIVE AND IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. NO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR PARTICULAR PURPOSE SHALL APPLY.

THE LIABILITY, IF ANY, OF HELMER FOR DIRECT DAMAGES WHETHER ARISING FROM A BREACH OF ANY SALES AGREEMENT, BREACH OF WARRANTY, NEGLIGENCE, OR INDEMNITY, STRICT LIABILITY OR OTHER TORT, OR OTHERWISE WITH RESPECT TO THE GOODS OR ANY
SERVICES IS LIMITED TO AN AMOUNT NOT TO EXCEED THE PRICE OF THE PARTICULAR GOODS OR SERVICES GIVING RISE TO THE LIABILITY. IN NO EVENT SHALL HELMER BE LIABLE FOR ANY INDIRECT, INCIDENTAL, CONSEQUENTIAL, OR SPECIAL DAMAGES, INCLUDING WITHOUT LIMITATION DAMAGES RELATED TO LOST REVENUES OR PROFITS, OR LOSS OF PRODUCTS.

This warranty does not cover damages caused in transit, during installation by accident, misuse, fire, flood, or acts of God. Further, this warranty will not be valid if Helmer determines that the failure was caused by a lack of performing recommended equipment maintenance (per Helmer manual) or by using the product in a manner other than for its intended use. Installation and calibration are not covered under this warranty agreement.

6.2 Outside of USA and Canada

Consult your local distributor for warranty information.
Section II: i.Series® - All Models

NOTE This section applies to iB, iPR, iLR, and iHB models.

7

Product Configuration

7.1 Install Battery for Backup Power

The monitoring system and chart recorder each have a battery system, enabling a period of continuous operation if power is lost.

NOTE The monitoring system will not start on battery power alone. If the refrigerator was previously not connected to AC power and the batteries are installed, the monitoring system will not run on battery power.

Battery life varies by manufacturer as well as voltage level remaining. Providing full power is available and no battery-related alarms are active, backup power for the monitoring system is available for up to two hours.

NOTICE When installing replacement batteries, use only batteries which meets the specifications outlined in chapter 10.7 (Supplies).

The batteries are located on the top of the refrigerator, behind the monitoring system. For 111 models, a service cover covers the components and an access panel provides access to the monitoring system backup batteries.

Five batteries are installed and one battery is included in the accessory package. Install the sixth battery to provide power to the monitoring system in the event of an AC power failure.
7.2 External Monitoring Devices

**CAUTION**
- The interface on the remote alarm monitoring system is intended for connection to the end user's central alarm system(s) that uses normally-open or normally-closed dry contacts.
- If an external power supply exceeding 30 V (RMS) or 60 V (DC) is connected to the remote alarm monitoring system's circuit, the remote alarm will not function properly; may be damaged; or may result in injury to the user.

**NOTE**
In the event of a power failure, the power failure alarm condition is transmitted through the remote alarm contacts.

The remote alarm interface is a relay switch with three terminals:
- **Common (COM)**
- **Normally Open (NO)**
- **Normally Closed (NC)**

Terminals are dry contacts and do not supply voltage. Interface circuit is either normally open or normally closed, depending on terminals used. Requirements for your alarm system determine which alarm wires must connect to terminals.
- **0.5 A at 30 V (RMS): 1.0 A at 24 V (DC)**

**7.2.1 Connect to Remote Alarm Interface**
1. Disconnect AC power from the refrigerator. Remove one battery from the monitoring system backup battery holder.
2. On back of refrigerator, locate the remote alarm terminals.
3. Connect remote alarm wires to appropriate terminals, according to requirements for your alarm system.
4. Use a cable tie to relieve strain on alarm wires (as necessary).
5. Reinstall the battery in the monitoring system backup battery holder. Reconnect the refrigerator to AC power.
6. Touch MUTE to disable the high temperature alarm while refrigerator reaches operating temperature.
7.3 Move Drawers, Shelves, and Baskets

Storage features.

**CAUTION**  
- Keep hands away from pinch points when closing the door.
- Before moving drawers, ensure they are completely empty for safe lifting.
- Maximum basket, drawer, or shelf load is 100 lbs (46 kg).

**NOTICE**  
Before moving storage components, protect stored items in refrigerator from extended exposure to adverse temperature.

**Remove a drawer or basket:**
1. Pull drawer or basket out until it stops.
2. On the right rail, locate the release tab and press downward.
3. While holding the right release tab downward, locate the release tab on the left rail and press upward.
4. Pull drawer or basket free of the slides.

**Install a drawer or basket:**
1. Align end guides on drawer or basket with the slides.
2. Gently push drawer or basket into chamber until it stops.
3. Pull drawer or basket out until it stops; check for smooth operation.

**Remove a shelf:**
1. With one hand, lift front edge of the shelf from the front brackets.
2. With the other hand, reach under the shelf and bump rear edge of the shelf upward to disengage rear brackets.

**Install a shelf:**
1. Insert shelf into chamber, placing it on brackets.
2. Gently bump rear edge of the shelf downward to engage brackets.
3. Pulling shelf forward gently; shelf should not disengage from rear brackets.
7.4 Drawer Labels

Drawer with label holder shown (labels not provided).

7.5 Move Slides and Brackets

Remove drawer slides:
1. Using a screwdriver, remove front bracket retainers.
2. Tap front brackets upward to disengage standards.
3. Remove slides from standards.

Install drawer slides:
1. Insert slides into standard at appropriate height.
2. Tap front brackets downward to engage standards.
3. Using a screwdriver, install front bracket retainers.

Remove shelf brackets:
1. Using a screwdriver, remove front bracket retainers.
2. Tap front brackets upward to disengage standards.
3. Remove front brackets from standards.

Install shelf brackets:
1. Insert front brackets into standard at appropriate height.
2. Tap front brackets downward to engage standards.
3. Using a screwdriver, install front bracket retainers.

7.6 Optional Adapter Kits for Medication Dispensing Locks

Contact Helmer Technical Service or your distributor for service documentation pertaining to medication dispensing locks.
8 Temperature Monitor Settings

8.1 Home Screen

The HOME screen appears when:
► The HOME button is pressed from any other screen
► There is no interaction for two minutes on any screen other than those used to enter a password

![HOME screen on the monitoring system.](image)

8.1.1 Home Screen Functions

NOTE Refer to chapter 14 (i.Center Screen Reference) for a complete list of screens in the i.Center monitoring system.

► View current temperature readings
► View the current time and date
► View detailed information about current or previous alarm events
► View the remaining backup battery charge
► View active alarms
► Mute audible alarms
► Adjust contrast
► View 24-hour chamber temperature graph
► Access Main screen to view and change settings
8.2 Main Screen

The Main screen displays functional options that allow access to all other screens in the system.

MAIN screen functional options.

Functions available from the Main screen:

<table>

</tr>
</tbody>
</table>
The Temperature Graph screen appears when:

- The Temperature Graph feature is enabled
- There is no interaction for one minute on any screen
- There are no active alarms

**NOTE:** While there is power to the monitoring system, data from the chamber temperature probe is collected real-time, and the past 24 hours of collected data is stored and displayed.

In the event of an AC power failure, the monitoring system continues to collect and display temperature data as long as battery power is available. If AC power is restored before battery power fails, there is no interruption in data collection. The temperature that is displayed on the graph for eight hours earlier was the temperature eight hours ago.

If battery power fails, the monitoring system stops displaying temperature data and stops collecting new temperature data. The past 24 hours of data temperature data is retained. When AC power is restored, the stored data is displayed, and the monitor resumes collecting and displaying real-time temperature data. In this case, there is an interruption in data collection: the temperature displayed on the graph for eight hours earlier was the temperature at eight hours before the backup power failed.

**8.3.1 Enable or Disable the Temperature Graph**

The i.Center has a real-time temperature graph which displays temperature probe readings for the past 24 hours of operation. This graph appears on the bottom of the HOME screen when no button has been pressed for one minute, and if no alarm is active. The graph clears if a button is pressed or an alarm activates.

**NOTE:** The temperature graph is enabled by default.

**Enable or disable the temperature graph:**

1. On the HOME screen, press the MAIN button.
2. Press the DOWN button to select Edit Configuration. Press the SELECT button.
3. Enter the password when prompted.
4. Press the DOWN button to select Alarm Setpoints. Press the SELECT button.
5. Press the DOWN button to select Temperature Graph.
6. Press the INC or DEC buttons to select enable or disable the temperature graph.
7. Press the BACK button to return to the Edit Configuration screen, or press the HOME button to exit.
8.4 Change Configuration Password

The default password is 1234. A new password must use four digits, ranging from 1 to 5.

Change the password:

1. On the HOME screen, press the MAIN button.
2. Press the DOWN button to select Edit Configuration. Press the SELECT button.
3. Enter the password when prompted.
4. Press the DOWN button to select Change Password. Press the SELECT button.
5. Enter the new password, then re-enter the new password when prompted.
   - If password entries match, the “update” message is displayed.
   - If password entries do not match, the “incorrect match” message is displayed. Repeat the
   procedure to change the password.

8.5 Calibrate Chamber Temperature Probe

Verify the temperature probe is reading chamber temperature correctly by comparing the chamber probe reading to temperature read by an independent thermometer. If the chamber temperature probe is not reading correctly, change the value displayed on the temperature monitoring system.

NOTE
If the variance is within acceptable limits for your organization, changing probe settings is optional.

► Default setting for chamber temperature is 4.0 °C
► Value is factory-preset

Obtain:
► Independent thermometer, calibrated and traceable per national standards

Measure the chamber temperature:

1. Remove the probe from the probe bottle.
2. Unscrew the cap from the bottle.
3. Insert the thermometer and temperature probe in the bottle. The probe and thermometer should be immersed at least 2” (50 mm).
4. Close the door and allow the chamber temperature to stabilize for 10 minutes.
5. Observe and note the thermometer temperature.

EXAMPLE
► Measured temperature (at the probe bottle) is 4.0 °C
► Displayed temperature is 4.5 °C
► Change displayed temperature to 4.0 °C

Enter the new calibration value:

1. On the HOME screen, press the MAIN button.
2. Press the DOWN button to highlight Edit Configuration. Press the SELECT button.
3. Enter the password when prompted.
4. Press the DOWN button to highlight Temperature Calibration. Press the SELECT button.
   a. The Select Temp Probe: (Upper or Lower) option is highlighted.
   b. Press the INC or DEC buttons to select the Upper or Lower probe option.
   c. Press the DOWN button to highlight Temperature.
   d. Press the INC or DEC buttons to change the temperature calibration value.
5 Press the **DOWN** button to highlight Store Calibration.
   a To save the new value, press the **ENTER** button. The “Calibration Memorized” message appears. New settings are saved.
   b To discard the new value, press the **BACK** button or **HOME** button to exit. New settings are not saved.

6 Remove thermometer and probe from bottle.
7 Replace the probe in probe bottle.
8 Replace bottle cap, ensuring a tight fit.
9 Place the probe in bottle, immersing at least 2” (50 mm).

**NOTE**
- The current temperature displayed by the monitoring system may change so that it no longer matches the new probe calibration value. This is normal.
- If a new probe value is entered but not saved, the new value will appear when the calibration setting for the probe is viewed. This is normal.

8.6 Factory Default Settings

Settings listed below may be simultaneously returned to factory default values.

**NOTE**
The factory default settings may not be the same as the settings that were factory-calibrated before the refrigerator was shipped.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Restored Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>High Alarm Setpoint</td>
<td>5.5 °C</td>
</tr>
<tr>
<td>Low Alarm Setpoint (1)</td>
<td>1.5 °C</td>
</tr>
<tr>
<td>Condenser Alarm Setpoint</td>
<td>50.0 °C</td>
</tr>
<tr>
<td>Door Ajar Timeout</td>
<td>3 minutes</td>
</tr>
<tr>
<td>Power Failure Timeout</td>
<td>3 minutes</td>
</tr>
<tr>
<td>Chart Paper Timer</td>
<td>6.5 days</td>
</tr>
</tbody>
</table>

(1) This includes laboratory (iLR) and pharmacy (iPR) models that were originally set at 2.0 °C.

**NOTE**
Unless your organization requires the Low Alarm Setpoint to be at the factory default level of 1.5 °C, it will be necessary to increase the setpoint to 2.0 °C after restoring factory defaults.

8.7 Restore Factory Default Settings

**Restore settings:**
1 Press the **MAIN** button.
2 Press the **DOWN** button to highlight Edit Configuration. Press the **SELECT** button.
3 Enter the password when prompted.
4 Press the **DOWN** button to highlight Factory Default Settings. Press the **SELECT** button.
5 Do one of the following:
   - Press the **ENTER** button. Factory default settings are restored.
   - Press the **BACK** button. Factory default settings are not restored.
8.8 Alarm Settings

The following alarm settings may be changed by the operator. The setpoint for temperature alarms may be changed (where applicable), as well as the time delay between when the alarm condition commences and when the visual and audible alarms are initiated.

8.8.1 Alarm Volume

The alarm volume can be changed. The Alarm Volume controls volume for all audible alarms.

- Default setting is 10
- Setting can be changed from 1 to 10
- 1 is the quietest setting; 10 is the loudest setting

Change the alarm volume:
1. Press the MAIN button.
2. Press the DOWN button to highlight Edit Configuration. Press the SELECT button.
3. Enter the password when prompted.
4. Press the DOWN button to highlight System Options. Press the SELECT button.
5. Press the DOWN button to highlight Alarm Volume.
6. Press the INC or DEC buttons to change the setting.
7. Press the BACK button to return to the Edit Configuration screen, or press the HOME button to exit.
   The new settings are saved.

8.8.2 Alarm Pulse

The alarm pattern can be changed. This is useful if several refrigerators with alarms are collocated, and distinguishing the source of the alarm quickly is desirable.

- Default setting is Single.
- Setting can be changed between Single, Double, Triple, and Constant.

Change the alarm pulse:
1. Press the MAIN button.
2. Press the DOWN button to highlight Edit Configuration. Press the SELECT button.
3. Enter the password when prompted.
4. Press the DOWN button to highlight System Options. Press the SELECT button.
5. Press the DOWN button to highlight Alarm Pulse.
6. Press the INC or DEC buttons to change the setting.
7. Press the BACK button to return to the Edit Configuration screen, or press the HOME button to exit.
   The new settings are saved.

8.8.3 High Chamber Temperature Alarm

The High Alarm setpoint specifies the temperature at which the High Temperature Alarm activates. If the temperature detected by the chamber probe is greater than or equal to this value, the alarm activates.

- Default setpoint is 5.5 °C
- Setpoint can be changed from -40 °C to +40 °C

Change the setpoint:
1. Press the MAIN button.
2. Press the DOWN button to highlight Edit Configuration. Press the SELECT button.
3. Enter the password when prompted.
4. Press the DOWN button to highlight Alarm Setpoints. Press the SELECT button.
5. Press the DOWN button to highlight High Alarm Setpoint.
6. Press the INC or DEC buttons to change the setting.
Press the **BACK** button to return to the Edit Configuration screen, or press the **HOME** button to exit. The new settings are saved.

### 8.8.4 Low Chamber Temperature Alarm

The Low Alarm setpoint specifies the temperature at which the Low Temperature Alarm activates. If the temperature detected by the chamber probe is less than or equal to this value, the alarm activates.

- Default setpoint is 1.5 °C (iB models)
- Default setpoint is 2.0 °C (iLR models)
- Setpoint can be changed from -40 °C to +40 °C

**Change the setpoint:**

1. Press the **MAIN** button.
2. Press the **DOWN** button to highlight Edit Configuration. Press the **SELECT** button.
3. Enter the password when prompted.
4. Press the **DOWN** button to highlight Alarm Setpoints. Press the **SELECT** button.
5. Press the **DOWN** button to highlight Low Alarm Setpoint.
6. Press the **INC** or **DEC** buttons to change the setting.
7. Press the **BACK** button to return to the Edit Configuration screen, or press the **HOME** button to exit. The new settings are saved.

### 8.8.5 Condenser Temperature Alarm

The Condenser Alarm setpoint specifies the temperature at which the Condenser Temperature Alarm activates. If the temperature of the condenser discharge line is greater than or equal to this value, the alarm activates.

- Default setpoint is 50 °C
- Setpoint can be changed from -40 °C to +80 °C

**NOTICE** Condenser Temperature Alarm should not be changed unless directed by Helmer Technical Service.

**Change the setpoint:**

1. Press the **MAIN** button.
2. Press the **DOWN** button to highlight Edit Configuration. Press the **SELECT** button.
3. Enter the password when prompted.
4. Press the **DOWN** button to highlight Alarm Setpoints. Press the **SELECT** button.
5. Press the **DOWN** button to highlight Cond. Alarm Setpoint.
6. Press the **INC** or **DEC** buttons to change the setting.
7. Press the **BACK** button to return to the Edit Configuration screen, or press the **HOME** button to exit. The new settings are saved.

### 8.8.6 Door Ajar Alarm

The Door Ajar Timeout specifies longest time the refrigerator door can be open before the alarm activates. If the time elapsed since the last door opening is greater than or equal to this value, the alarm activates.

- Default delay setting is three minutes
- Setting can be changed from 0 minutes to 60 minutes

**Change the alarm delay:**

1. Press the **MAIN** button.
2. Press the **DOWN** button to highlight Edit Configuration. Press the **SELECT** button.
3 Enter the password when prompted.
4 Press the DOWN button to highlight Alarm Setpoints. Press the SELECT button.
5 Press the DOWN button to highlight Door Ajar Timeout.
6 Press the INC or DEC buttons to change the setting.
7 Press the BACK button to return to the Edit Configuration screen, or press the HOME button to exit.
   The new settings are saved.

8.8.7 Power Failure Alarm
The Power Failure Timeout specifies longest time the refrigerator can be without AC power before the
alarm activates. If the time elapsed since the last power failure is greater than or equal to this value, the
alarm activates.
   ► Default delay setting is three minutes
   ► Setting can be changed from 0 minutes to 60 minutes

Change the alarm delay:
1 Press the MAIN button.
2 Press the DOWN button to highlight Edit Configuration. Press the SELECT button.
3 Enter the password when prompted.
4 Press the DOWN button to highlight Alarm Setpoints. Press the SELECT button.
5 Press the DOWN button to highlight Power Failure Timeout.
6 Press the INC or DEC buttons to change the setting.
7 Press the BACK button to return to the Edit Configuration screen, or press the HOME button to exit.
   The new settings are saved.

8.8.8 Chart Paper Alarm
The default setting for the chart paper timer is Enabled. One sheet of chart paper records temperatures
continuously for seven days. The timer activates an alarm 6.5 days from when the timer is reset. The
timer period cannot be changed.

NOTE
   ► Available options are Enabled, Disabled, and Reset.
   ► Enabling the timer also resets the timer.

Change the setting:
1 Press the MAIN button.
2 Press the DOWN button to highlight Edit Configuration. Press the SELECT button.
3 Enter the password when prompted.
4 Press the DOWN button to highlight System Options. Press the SELECT button.
5 Press the DOWN button to highlight Chart Paper Timer.
6 Press the INC or DEC buttons to select Enabled, Disabled, or Reset.
7 Do one of the following:
   ► If Enabled or Disabled is selected, press the BACK button to return to the System Options
     screen, or press the HOME button to exit. The new setting is saved.
   ► If Reset is selected:
     a Press the DOWN button.
     b Press the PAPER-CHANGED button. The System Options screen appears with the Chart
       Paper Timer set to Enabled.
8 Press the BACK button to return to the System Options screen, or press the HOME button to exit.
   The new setting is saved.
Test Alarms

Test alarms to ensure they are working correctly. The refrigerator has alarms for chamber temperature, compressor temperature, door open (time), no battery, and power failure.

**NOTICE**
Before testing alarms, protect items in the refrigerator from extended exposure to adverse temperature.

8.9.1 Automatic Chamber Temperature Alarm Test

**NOTE**
- Calibrate the chamber temperature probe prior to performing the Automatic Chamber alarm test.
- The test can be aborted by selecting the Cancel High or Low Test option.
- The test takes less than five minutes.

When performing an automatic temperature alarm test, the Peltier device heats or cools the temperature probe until the high or low alarm setpoint is reached. An event is added to the Event Log to indicate a temperature alarm was activated.

**Test the low alarm:**
1. Identify the current setting for the low alarm setpoint.
2. Press the **MAIN** button.
3. Press the **DOWN** button to select System Alarm Test & Status. Press the **SELECT** button.
   - The System Alarm Test & Status screen appears.
4. Press the **DOWN** button to select Start Low Alarm Auto Test. Press the **SELECT** button.
   - The “Low Alarm Test in Progress” message appears.
   - The alarm will activate when the alarm setpoint is reached.
   - When the test is complete, the message clears.
5. View the Event Log. Note the temperature at which the low alarm occurred. Compare the temperature to the low alarm setpoint. If the values do not match, refer to chapter 11 (Troubleshooting).

**Test the high alarm:**
1. Identify the current setting for the high alarm setpoint.
2. Press the **MAIN** button.
3. Press the **DOWN** button to select System Alarm Test & Status. Press the **SELECT** button.
   - The System Alarm Test & Status screen appears.
4. Press the **DOWN** button to select Start High Alarm Auto Test. Press the **SELECT** button.
   - The “High Alarm Test in Progress” message appears.
   - The alarm will activate when the alarm setpoint is reached.
   - When the test is complete, the message clears.
5. View the Event Log. Note the temperature at which the high alarm occurred. Compare the temperature to the high alarm setpoint. If the values do not match, refer to chapter 11 (Troubleshooting).
Cancel the test:
1. Press the MAIN button.
2. Press the DOWN button to select System Alarm Test & Status. Press the SELECT button.  
   ► The System Alarm Test & Status screen appears.
3. Press the DOWN button to select Cancel High or Low Test. Press the ENTER button.  
   ► The test is cancelled.

NOTE When cancelling an automatic test, the message indicating the test is in progress clears immediately. If a setpoint was reached before the test was cancelled, the alarm activates and clears, as described earlier.

8.9.2 Manual Chamber Alarm Test

NOTICE Before testing alarms, protect items in refrigerator from extended exposure to adverse temperature.

IMPORTANT Perform the low alarm test before the high alarm test to control the temperature more closely and complete the testing more quickly.

Obtain:
► (2) 8 oz. (250 mL) glass half-full of chilled water
► (1) glass filled with crushed ice
► (1) 8 oz. (250 mL) glass half-full of warm water

NOTICE Temperature probes are fragile; handle with care.

Test the low alarm:
1. Identify setting for low alarm setpoint.
2. Remove chamber temperature probe from bottle.
3. Immerse probe in chilled water.
4. While stirring probe in chilled water, add approximately one teaspoon (5 mL) of ice every 20 seconds. Ensure probe is at the bottom of the glass.
5. When low temperature alarm activates, note the temperature on the i.Center display.
6. Compare the temperature at which the alarm activates to the low alarm setpoint. If values do not match, calibrate the temperature probe.

Test the high alarm:
1. Identify setting for high alarm setpoint.
2. While stirring probe in chilled water, add warm water so temperature increases 0.5 °C per minute.
3. When high temperature alarm activates, note the temperature on the i.Center display.
4. Compare the temperature at which the alarm activates to the high alarm setpoint. If values do not match, calibrate the temperature probe.
5. Remove probe from warm water.
6. Place temperature probe in probe bottle, immersing it at least 2” (50 mm).
8.9.3 Power Failure Alarm Test

NOTE  ► During a power failure, the power failure alarm activates and the batteries provide power to the monitoring system.
► If AC power fails, the backup batteries will allow for continued data collection and temperature display.
► If the backup batteries fail, data is not collected and the temperature is not displayed.
► When power is restored, the 24 hours of data prior to the power loss are retained in the system memory. Stored temperature data is displayed on the graph and the monitoring system resumes data collection and display.

1  Confirm the refrigerator is connected to AC power.
2  Ensure the monitoring system backup batteries are installed.
3  Change Power Failure Timeout setting to 0 minutes.
   a  Press the MAIN button.
   b  Press the DOWN button to highlight Edit Configuration. Press the SELECT button.
   c  Enter the password when prompted.
   d  Press the DOWN button to highlight Alarm Setpoints. Press the SELECT button.
   e  Press the DOWN button to highlight Power Failure Timeout.
   f  Press the DEC button to change the setting to 0.
4  Disconnect the refrigerator from AC power. Power failure alarm will activate immediately.
5  Reconnect the refrigerator to AC power. Power failure alarm will clear and audible alarm will cease.
6  Change the Power Failure Timeout setting to the original setting.

8.9.4 Door Ajar Alarm Test

1  Change Door Ajar Timeout setting to 0 minutes:
   a  Press the MAIN button.
   b  Press the DOWN button to highlight Edit Configuration. Press the SELECT button.
   c  Enter the password when prompted.
   d  Press the DOWN button to highlight Alarm Setpoints. Press the SELECT button.
   e  Press the DOWN button to highlight Door Ajar Timeout.
   f  Press the DEC button to change the setting to 0.
   g  Press the BACK button to return to the Edit Configuration screen, or press the HOME button to exit. New settings are saved.
2  Open the door. Door ajar alarm will activate immediately.
3  Close the door. Door ajar alarm will clear and audible alarm will cease.
4  Change the Door Ajar Timeout setting to the original setting.

8.9.5 No Battery Alarm Test

Test the no battery alarm to ensure the alarm provides warning of a low- or no-battery charge.

NOTE  ► During an AC power failure, the power failure alarm activates and the batteries provide power to the monitoring system.
► If AC power fails, the backup batteries will allow for continued data collection and temperature display.
► If the backup batteries fail, data is not collected and the temperature is not displayed.
Test the alarm:
1. Ensure the monitoring system backup batteries are installed.
2. Remove one battery from the monitoring system backup battery holder.
   a. If the no battery alarm activates, no further action is needed. Reinstall the battery.
   b. If the no battery alarm does not activate, contact Helmer Technical Service.

| NOTICE | When installing replacement batteries, use only batteries which meet the specifications outlined in chapter 10.7 (Supplies). |

8.10 Additional System Settings

8.10.1 Screen Contrast
The screen contrast can be changed for easier viewing.

| NOTE | ► During an AC power failure, the screen backlight is not illuminated to conserve backup battery power. ► During an AC power failure, the screen contrast cannot be changed. |

Change screen contrast:
1. On the HOME screen, press the third button from the left to make the text appear lighter.
2. On the HOME screen, press the second button from the left to make the text appear darker.

8.10.2 Date and Time
The Date Format setting controls the order in which the month (mm) and day (dd) are displayed.
► Month is a 2-digit number (01-12)
► Day is a 2-digit number (01-31)
► Default date format is mm/dd/yyyy

The Clock Mode setting controls whether the time is displayed in a 12-hour or 24-hour format.
► When using the 12-hour format, AM or PM must be specified
► Default setting is 12-hour

Change date and time settings:
1. Press the MAIN button.
2. Press the DOWN button to highlight Edit Configuration. Press the SELECT button.
3. Enter the password when prompted.
4. Press the DOWN button to highlight Set Date & Time. Press the SELECT button.
5. Press the UP or DOWN buttons to select the date and time settings to change.
6. Press the INC or DEC buttons to change the setting.
7. Press the BACK button to return to the Edit Configuration screen, or press the HOME button to exit.
   The new settings are saved.

8.10.3 Display Language
The i.Center monitoring system stores two languages. English is the default language. If a different language is desired, it must be loaded from the flash memory card. If a flash memory card is not included with the refrigerator, the languages may have been loaded to the i.Center prior to shipment.

To obtain a flash memory card to load an alternate language, contact Helmer Technical Service.

| NOTE | Each time the refrigerator is powered on, the i.Center display language must be selected. |
Set the display language on power-on:
1. Connect the refrigerator to AC power.
2. Install the monitoring system battery that is included in the accessory package.
   ► The refrigerator powers on and the i.Center will display the System Options screen.
3. Press the INC or DEC buttons to select the desired language. Press the SELECT button.
4. Press the HOME button to return to the HOME screen.
5. If a temperature alarm sounds, press the MUTE button.

Change the display language:
1. Press the MAIN button.
2. Press the DOWN button to highlight Edit Configuration. Press the SELECT button.
3. Enter the password when prompted.
4. Press the DOWN button to highlight System Options. Press the SELECT button.
5. Press the UP or DOWN buttons to select Language. Press the SELECT button.
6. Press the INC or DEC buttons to select the desired language.
7. Press the BACK button to return to the System Options screen, or press the HOME button to exit.
   The new settings are saved.

8.10.4 Temperature Units
Available options are Celsius (°C) or Fahrenheit (°F). The default temperature unit is Celsius.

Change temperature units:
1. Press the MAIN button.
2. Press the DOWN button to highlight Edit Configuration. Press the SELECT button.
3. Enter the password when prompted.
4. Press the DOWN button to highlight System Options. Press the SELECT button.
5. Press the DOWN button to highlight Temperature Units.
6. Press the INC or DEC buttons to select the desired temperature units.
7. Press the BACK button to return to the Edit Configuration screen, or press the HOME button to exit.
   The new setting is saved.
8.11 Event Log

The Event Log shows information from alarm events.
► 50 (most recent) events can be viewed on the Event Log screen.
► Number of door openings for the current and previous day can be viewed.

View the event log:
1  Press the MAIN button.
2  Press the DOWN button to highlight Event Log. Press the SELECT button.
   ► The Event Log screen is displayed.

Event log format:
EVENT LOG  Door  AA/AA BB/BB
           Openings:  C  D
EE F GG HH/HH/HH II:IIJ KK.KK°L

</tr>
</tbody>
</table>

View an event:
1. Press the MAIN button.
2. Press the DOWN button to highlight Event Log. Press the SELECT button.
3. From the Event Log screen, press the UP or DOWN buttons to highlight the desired event number. Press the SELECT button.
   ► The Event Log Detail screen for the selected event is displayed.
4. Press the BACK button to return to the Event Log screen, or press the HOME button to exit.

NOTE If the event is highlighted the alarm for that event was caused by a system self-test, initiated by an operator.

8.12 Upgrade System Firmware
Helmer may occasionally issue updates for the i.Center firmware. Follow upgrade instructions included with the firmware update.

8.13 Reset the i.Center Monitoring System
1. Remove 1 battery from the monitoring system backup battery holder.
2. Disconnect the refrigerator from AC power.
3. Reconnect the refrigerator to AC power.
4. Reinstall the battery in the monitoring system backup battery holder.
View Manufacturer and Product Information

1 Press the MAIN button.
2 Press the INC or DEC buttons to select the Product/Company Information option. Press the SELECT button.
   ► Manufacturer contact information appears.
   ► Software version appears.

Temperature Controller Setpoints

The temperature controller is located in the electrical box on the rear of the refrigerator. Temperature controller setpoints are programmed at the factory. Setpoints can be viewed and changed through the temperature controller. Parameter values reside in four program levels.

View or change parameter values:

- NOTICE Changing parameter values affects refrigerator operation. Do not change parameter values unless instructed by Helmer Technical Service.

- NOTE
  ► To change the value for a parameter, first enter the program mode for that level.
  ► When there is no interaction for 60 seconds, the temperature controller exits program mode.

1 Enter Level 1 program mode:
   a Press and hold the UP and DOWN buttons simultaneously for approximately three seconds.
   b “tunE” and “oFF” flash on the display.
   c The temperature controller is now in Level 1 program mode.

2 Select the parameter to be changed:
   a Press and release the UP or DOWN buttons until the desired parameter flashes on the display.
   b To access Level 2 or Level 3 parameters, select the “LEVL” parameter.

3 Change a parameter value:
   a Press and hold the * button.
   b Press the UP or DOWN buttons to change the parameter value.
   c To access Level 2 parameters, change the value for the “LEVL” parameter to 2.
   d To access Level 3 parameters, change the value for the “LEVL” parameter to 3.

4 Release all buttons to exit the parameter. New settings are saved.
   ► If the “LEVL” parameter value is changed, the temperature controller returns to the selected program level.

5 Repeat steps 2 through 4 to access another program level, or to view or change parameter values in the selected level.
6 Access Level 4 parameters:
   a Navigate to Level 3 program mode.
   b Select the “UEr” parameter.
   c Press and hold the UP and DOWN buttons simultaneously for approximately 10 seconds.
   d The “LOCK” parameter flashes on the display.

7 Exit program mode:
   a Press and hold the UP and DOWN arrow buttons simultaneously for approximately three seconds, or
   b the current chamber temperature is displayed.

9.1 Level 1 Parameters and Values

NOTE ► Parameters are listed in order of appearance.
   ► The temperature controller is programmed at the factory with a refrigerator setpoint of 4.0 °C.

9.5 Change the Refrigerator Setpoint

![Independent temperature controller.]

**NOTICE**
- Do not change the setpoint to a value outside the temperature control range.
- Parameter values are factory-preset and should not be changed unless directed by Helmer Technical Service.

**NOTE**
- Default setpoint varies for each refrigerator.
- Setpoint is adjusted to achieve an average chamber temperature of 4.0 °C.
- The reference temperature displayed on the temperature controller may not be the same as the temperature displayed on the i.Center monitor.
- Allow the temperature to stabilize for 10 minutes prior to changing the setpoint again.

1. Observe the average chamber temperature displayed on the i.Center monitoring system, after the monitoring system probe has been calibrated.
2. Determine how much the refrigerator setpoint will be changed.

**EXAMPLE**
- Average observed temperature is 3.5 °C
- Desired average temperature is 4.0 °C
- Current setpoint is 6.0 °C
- Adjust setpoint to 6.3 °C

3. Access the setpoint adjustment function:
   a. Press and hold the ♠ button.
      - The controller displays current setpoint value.
4. Change the setpoint by the setpoint adjustment value:
   a. Press and hold the ♠ button.
   b. Press the UP or DOWN buttons to increase or decrease setpoint in increments of 0.1 °C.
5. Release all buttons to exit the setpoint parameter. New settings are saved.
9.6 Change the Hysteresis Value

► Default setpoint for iB and iHB models is 4.0 °C
► Default setpoint for iLR111 and iPR111 models is 1.5 °C
► Allowable temperature variance on each side of the refrigerator setpoint

⚠️ NOTICE

Hysteresis is factory-preset and should not be changed unless directed by Helmer Technical Service.

10 Maintenance

⚠️ NOTICE

► Before performing maintenance, protect items in refrigerator from extended exposure to adverse temperature.
► Allow refrigerator temperature to stabilize at setpoint after performing service or after extended door opening.

NOTE

Refer to the operation manual for the preventive maintenance schedule.

10.1 Recharge Refrigerant

⚠️ CAUTION

► Review all safety instructions prior to recharging refrigerant. Refer to chapter 2 (Safety).
► Maintenance should only be performed by trained refrigeration technicians.

⚠️ NOTICE

Use only non-CFC R-134A refrigerant.

Full initial refrigerant charge varies by model and power requirements, which can be found on the product specification label.

<table>

<td>20.0 oz. (567 g)</td>
</tr>
</tbody>
</table>

Obtain:

► Refrigerant
► Calibrated pressure gauge (0 psi to 25 psi (0 kPa to 175 kPa))

Add refrigerant:

1. Attach pressure gauge to the fittings on the refrigeration lines.
2. Monitor the low side (suction) pressure through a full compressor cycle.
3. Measure the pressure at the end of the next cycle, immediately before the compressor stops.

NOTE

Pressure varies depending on ambient air temperature.
4  Add refrigerant. Check the pressure on the low side.
   ►  Low side = 16 psi to 18 psi (110 kPa to 125 kPa)
5  Remove pressure gauge.

10.2  Test Monitoring System Backup Batteries
The i.Center monitoring system has visual indicators for battery charge level. If the batteries deplete to a particular voltage output, a flashing Low Battery alarm is initiated. If the batteries are missing or nearly depleted, the flashing No Battery alarm initiates.

Test backup batteries:
1  Disconnect the refrigerator from AC power.
   ►  Screen should continue to display information without backlight.
   ►  If the display is blank, replace batteries.
2  Reconnect the refrigerator to AC power.

10.3  Replace Monitoring System Backup Batteries
1  Remove the access panel on the top of the refrigerator (111 models only).
2  On the top of the refrigerator, remove six batteries and replace with six new batteries.

NOTICE  When installing replacement batteries, use only batteries which meet the specifications outlined in chapter 10.7 (Supplies).

3  Close the access panel (111 models only).

10.4  Replace the Fluorescent Lamps
1  Disconnect the refrigerator from AC power. Remove one battery from the monitoring system backup battery holder.
2  Single-door refrigerators: Remove drawers, shelves, baskets, and slides on the right side of the chamber.
3  Press short side of diffuser and unsnap it to remove from the light base.
4  Rotate defective light bulb and remove from the sockets.
5  Insert new light bulb into the sockets and rotate to lock into place.
6  Snap diffuser into the light base.
7  Reinstall the battery in the monitoring system backup battery holder. Reconnect the refrigerator to AC power.
8  Single-door refrigerators: Replace drawers, shelves, baskets, and slides.
9  Press the MUTE button to disable the high temperature alarm while refrigerator reaches operating temperature.

10.5  Clean the Refrigerator

10.5.1  Condenser Grill
In environments where refrigerator is exposed to excessive lint or dust, condenser grill may require cleaning more frequently than stated in preventive maintenance schedule.

Clean the condenser grill using a soft brush and a vacuum cleaner.

10.5.2  Exterior
Clean exterior surfaces with soft cotton cloth and non-abrasive liquid cleaner.
10.5.3 Interior
Clean painted surfaces with mild detergent. Clean stainless steel surfaces with a general-purpose laboratory cleaner suitable for stainless steel.

10.5.4 Door Gaskets
Clean with soft cloth and mild soap and water solution.

10.5.5 Clean and Refill Probe Bottle

NOTE A kit that includes a probe bottle and glycerin is available from Helmer.

Obtain:
► Fresh water-bleach solution (not provided)
  ► 1:9 ratio of bleach to water
  ► Bleach is 5% solution of commercial sodium hypochlorite (NaOCl)
  ► Equivalent oxidizing cleaner/disinfectant approved by your organization may be substituted
► 4 oz. (120 mL) of product simulation solution per bottle
  ► 10:1 ratio of water to glycerin

Clean and refill bottle:
1 Remove probe from bottle.
2 Remove bottle from bracket.
3 Clean bottle with water-bleach solution.
4 Fill bottle with 4 oz. (120 mL) of product simulation solution.
5 Cap bottle tightly to minimize evaporation.
6 Place bottle in bracket.
7 Replace probe, immersing at least 2" (50 mm).
10.6 Unit Cooler Cover Removal and Installation

If unit cooler cover is not removed as detailed in this procedure the drain port may be damaged. Improper drainage may result in excessive icing and refrigerator’s inability to maintain temperature.

Required tools:
- 5/16” socket wrench
- Tool to push putty away from the drain hose

<table>
<thead>
<tr>
<th>Label</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Unit cooler cover</td>
</tr>
<tr>
<td>B</td>
<td>Drain port</td>
</tr>
<tr>
<td>C</td>
<td>Drain hose</td>
</tr>
</tbody>
</table>

Drain line and hose.

10.6.1 Remove the Unit Cooler Cover

**WARNING**    Disconnect the refrigerator from AC power when removing the unit cooler.

**CAUTION**    The condensate evaporator and water evaporation tray are hot.

1. Disconnect the refrigerator from AC power. Remove one battery from the monitoring system backup battery holder.
2. Remove top drawer, basket, or shelf from the chamber.
3. On the back of the camber, peel putty back to expose drain hose (C).
4. Remove drain hose from unit cooler drain port (B).
   - Pull drain hose downward to separate from unit cooler.
   - Twist drain hose while pulling to assist in removal.
5. Push the drain hose (C) out through rear of chamber.
6. Remove the unit cooler cover.
   - Hold unit cooler cover in place to prevent it from dropping.
   - Use the socket wrench to remove four screws securing the unit cooler cover.
   - Carefully lower unit cooler cover to avoid damage to the fan wiring.
10.6.2 Install the Unit Cooler Cover

1 Verify unit cooler wiring is connected and routed correctly.
   a Wiring should be routed above copper tube inside the unit cooler.
   b Reconnect wires if they have separated.

2 Attach unit cooler cover.
   a Lift unit cooler cover into place.
   b Front edge of the cover should be behind the unit cooler case.
   c Use the socket wrench to install four screws to secure the unit cooler cover.

3 Insert the drain hose through hole in the refrigerator.
   a Push drain hose upward, toward the unit cooler drain port.
   b In the chamber, push drain hose onto unit cooler drain port.

4 On the back of the chamber, press putty around the drain hose.

5 Reinstall the top drawer, shelf, or basket.

6 Reinstall the battery in the monitoring system backup battery holder. Reconnect the refrigerator to AC power.

7 Press the Mute button to disable the high temperature alarm while refrigerator reaches operating temperature.

10.7 Supplies

Refrigerant: non-CFC, R-134A
Chart paper: 220366 (52 sheets)
Glycerin solution: 400922-1
Fluorescent lamp: T5, 13 W

Monitoring system batteries: (6) 1.5 V, D-cell non-rechargeable alkaline batteries (or equivalent): 715031
Chart recorder battery (optional): (1) 9 V non-rechargeable alkaline (or equivalent): 120218
Trouble shooting  

CAUTION  ► Review all safety instructions prior to troubleshooting. Refer to chapter 2 (Safety).
► Troubleshooting should only be performed by trained refrigeration technicians.

11.1 General Operation Problems

<table>
<thead>
<tr>

Product Configuration

15.1 Install Battery for Backup Power

The monitoring system has a battery system, enabling a period of continuous operation if power is lost.

NOTE The monitoring system will not start on battery power alone. If the refrigerator was previously not connected to AC power and the batteries are installed, the monitoring system will not run on battery power.

Battery life varies by manufacturer as well as voltage level remaining. Providing full power is available and no battery-related alarms are active, backup power for the monitoring system is available for up to two hours.

NOTICE When installing replacement batteries, use only batteries which meets the specifications outlined in chapter 18.6 (Supplies).

The batteries are located on the top of the refrigerator, behind the monitoring system. For 111 models, a service cover covers the components and an access panel provides access to the monitoring system backup batteries.

Monitoring system backup batteries.

Five batteries are installed and one battery is included in the accessory package. Install the sixth battery to provide power to the monitoring system in the event of an AC power failure.
15.2 External Monitoring Devices

CAUTION
► The interface on the remote alarm monitoring system is intended for connection to the end user's central alarm system(s) that uses normally-open or normally-closed dry contacts.
► If an external power supply exceeding 30 V (RMS) or 60 V (DC) is connected to the remote alarm monitoring system's circuit, the remote alarm will not function properly; may be damaged; or may result in injury to the user.

NOTE
In the event of a power failure, the power failure alarm condition is transmitted through the remote alarm contacts.

The remote alarm interface is a relay switch with three terminals:
► Common (COM)
► Normally Open (NO)
► Normally Closed (NC)

Terminals are dry contacts and do not supply voltage. Interface circuit is either normally open or normally closed, depending on terminals used. Requirements for your alarm system determine which alarm wires must connect to terminals.
► 0.5 A at 30 V (RMS): 1.0 A at 24 V (DC)

15.2.1 Connect to Remote Alarm Interface
1 Disconnect AC power from the refrigerator. Remove one battery from the monitoring system backup battery holder.
2 On back of refrigerator, locate the remote alarm terminals.
3 Connect remote alarm wires to appropriate terminals, according to requirements for your alarm system.
4 Use a cable tie to relieve strain on alarm wires (as necessary).
5 Reinstall the battery in the monitoring system backup battery holder. Reconnect the refrigerator to AC power.
6 Touch MUTE to disable the high temperature alarm while refrigerator reaches operating temperature.
Move Drawers, Shelves, and Baskets

Storage features.

CAUTION

► Keep hands away from pinch points when closing the door.
► Before moving drawers, ensure they are completely empty for safe lifting.
► Maximum basket, drawer, or shelf load is 100 lbs (46 kg).

NOTICE

Before moving storage components, protect stored items in refrigerator from extended exposure to adverse temperature.

Remove a drawer or basket:
1. Pull drawer or basket out until it stops.
2. On the right rail, locate the release tab and press downward.
3. While holding the right release tab downward, locate the release tab on the left rail and press upward.
4. Pull drawer or basket free of the slides.

Install a drawer or basket:
1. Align end guides on drawer or basket with the slides.
2. Gently push drawer or basket into chamber until it stops.
3. Pull drawer or basket out until it stops; check for smooth operation.

Remove a shelf:
1. With one hand, lift front edge of the shelf from the front brackets.
2. With the other hand, reach under the shelf and bump rear edge of the shelf upward to disengage rear brackets.

Install a shelf:
1. Insert shelf into chamber, placing it on brackets.
2. Gently bump rear edge of the shelf downward to engage brackets.
3. Pulling shelf forward gently; shelf should not disengage from rear brackets.
15.4 Move Slides and Brackets

Remove drawer slides:
1. Using a screwdriver, remove front bracket retainers.
2. Tap front brackets upward to disengage standards.
3. Remove slides from standards.

Install drawer slides:
1. Insert slides into standard at appropriate height.
2. Tap front brackets downward to engage standards.
3. Using a screwdriver, install front bracket retainers.

Remove shelf brackets:
1. Using a screwdriver, remove front bracket retainers.
2. Tap front brackets upward to disengage standards.
3. Remove front brackets from standards.

Install shelf brackets:
1. Insert front brackets into standard at appropriate height.
2. Tap front brackets downward to engage standards.
3. Using a screwdriver, install front bracket retainers.

15.5 Optional Adapter Kits for Medication Dispensing Locks
Contact Helmer Technical Service or your distributor for service documentation pertaining to medication dispensing locks.

16 Temperature Monitor Settings

16.1 Home Screen
The HOME screen appears when:
► The HOME button is pressed from any other screen
► There is no interaction for two minutes on any screen other than those used to enter a password

16.3 Change Configuration Password

The default password is 1234. A new password must use four digits, ranging from 1 to 5.

Change the password:

1. On the HOME screen, press the MAIN button.
2. Press the DOWN button to select Edit Configuration. Press the SELECT button.
3. Enter the password when prompted.
4. Press the DOWN button to select Change Password. Press the SELECT button.
5. Enter the new password, then re-enter the new password when prompted.
   - If password entries match, the “update” message is displayed.
   - If password entries do not match, the “incorrect match” message is displayed. Repeat the procedure to change the password.

16.4 Calibrate Chamber Temperature Probe

Verify the temperature probe is reading chamber temperature correctly by comparing the chamber probe reading to temperature read by an independent thermometer. If the chamber temperature probe is not reading correctly, change the value displayed on the temperature monitoring system.

NOTE
If the variance is within acceptable limits for your organization, changing probe settings is optional.

- Default setting for chamber temperature is 4.0 °C
- Value is factory-preset

Obtain:
- Independent thermometer, calibrated and traceable per national standards

Measure the chamber temperature:

1. Remove the probe from the probe bottle.
2. Unscrew the cap from the bottle.
3. Insert the thermometer and temperature probe in the bottle. The probe and thermometer should be immersed at least 2” (50 mm).
4. Close the door and allow the chamber temperature to stabilize for 10 minutes.
5. Observe and note the thermometer temperature.

EXAMPLE
- Measured temperature (at the probe bottle) is 4.0 °C
- Displayed temperature is 4.5 °C
- Change displayed temperature to 4.0 °C

Enter the new calibration value:

1. On the HOME screen, press the MAIN button.
2. Press the DOWN button to highlight Edit Configuration. Press the SELECT button.
3. Enter the password when prompted.
4. Press the DOWN button to highlight Temperature Calibration. Press the SELECT button.
   a. The Upper Probe option is displayed and the Temperature option is highlighted.
   b. Press the INC or DEC buttons to change the displayed value to match the value measured by the independent thermometer.
Press the DOWN button to highlight Store Calibration.

a. To save the new value, press the ENTER button. The “Calibration Memorized” message appears. New settings are saved.

b. To discard the new value, press the BACK button to return to the Edit Configuration screen, or press the HOME button to exit. New settings are not saved.

6. Remove thermometer and probe from bottle.
7. Replace the probe in probe bottle.
8. Replace bottle cap, ensuring a tight fit.
9. Place the probe in bottle, immersing at least 2” (50 mm).

NOTE
► The current temperature displayed by the monitoring system may change so that it no longer matches the new probe calibration value. This is normal.
► If a new probe value is entered but not saved, the new value will appear when the calibration setting for the probe is viewed. This is normal.

16.5 Factory Default Settings

Settings listed below may be simultaneously returned to factory default values.

NOTE
The factory default settings may not be the same as the settings that were factory-calibrated before the refrigerator was shipped.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Restored Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>High Alarm Setpoint</td>
<td>5.5 °C</td>
</tr>
<tr>
<td>Low Alarm Setpoint</td>
<td>1.5 °C</td>
</tr>
<tr>
<td>Door Ajar Timeout</td>
<td>3 minutes</td>
</tr>
<tr>
<td>Power Failure Timeout</td>
<td>3 minutes</td>
</tr>
<tr>
<td>Chart Paper Timer</td>
<td>6.5 days</td>
</tr>
</tbody>
</table>

NOTE
Unless your organization requires the Low Alarm Setpoint to be at the factory default level of 1.5 °C, it will be necessary to increase the setpoint to 2.0 °C after restoring factory defaults.

16.6 Restore Factory Default Settings

Restore settings:

1. Press the MAIN button.
2. Press the DOWN button to highlight Edit Configuration. Press the SELECT button.
3. Enter the password when prompted.
4. Press the DOWN button to highlight Factory Default Settings. Press the SELECT button.
5. Do one of the following:
   ► Press the ENTER button. Factory default settings are restored.
   ► Press the BACK button. Factory default settings are not restored.
16.7 Alarm Settings

The following alarm settings may be changed by the operator. The setpoint for temperature alarms may be changed (where applicable), as well as the time delay between when the alarm condition commences and when the visual and audible alarms are initiated.

16.7.1 Alarm Volume

The alarm volume can be changed. The Alarm Volume controls volume for all audible alarms.

► Default setting is 10
► Setting can be changed from 1 to 10
► 1 is the quietest setting; 10 is the loudest setting

Change the alarm volume:
1  Press the MAIN button.
2  Press the DOWN button to highlight Edit Configuration. Press the SELECT button.
3  Enter the password when prompted.
4  Press the DOWN button to highlight System Options. Press the SELECT button.
5  Press the DOWN button to highlight Alarm Volume.
6  Press the INC or DEC buttons to change the setting.
7  Press the BACK button to return to the Edit Configuration screen, or press the HOME button to exit.
   The new settings are saved.

16.7.2 Alarm Pulse

The alarm pattern can be changed. This is useful if several refrigerators with alarms are collocated, and distinguishing the source of the alarm quickly is desirable.

► Default setting is Single.
► Setting can be changed between Single, Double, Triple, and Constant.

Change the alarm pulse:
1  Press the MAIN button.
2  Press the DOWN button to highlight Edit Configuration. Press the SELECT button.
3  Enter the password when prompted.
4  Press the DOWN button to highlight System Options. Press the SELECT button.
5  Press the DOWN button to highlight Alarm Pulse.
6  Press the INC or DEC buttons to change the setting.
7  Press the BACK button to return to the Edit Configuration screen, or press the HOME button to exit.
   The new settings are saved.

16.7.3 High Chamber Temperature Alarm

The High Alarm setpoint specifies the temperature at which the High Temperature Alarm activates. If the temperature detected by the chamber probe is greater than or equal to this value, the alarm activates.

► Default setpoint is 5.5 °C
► Setpoint can be changed from -40 °C to +40 °C

Change the setpoint:
1  Press the MAIN button.
2  Press the DOWN button to highlight Edit Configuration. Press the SELECT button.
3  Enter the password when prompted.
4  Press the DOWN button to highlight Alarm Setpoints. Press the SELECT button.
5  Press the DOWN button to highlight High Alarm Setpoint.
6  Press the INC or DEC buttons to change the setting.
16.7.4 Low Chamber Temperature Alarm
The Low Alarm setpoint specifies the temperature at which the Low Temperature Alarm activates. If the temperature detected by the chamber probe is less than or equal to this value, the alarm activates.
► Default setpoint is 1.5 °C
► Setpoint can be changed from -40 °C to +40 °C

Change the setpoint:
1. Press the MAIN button.
2. Press the DOWN button to highlight Edit Configuration. Press the SELECT button.
3. Enter the password when prompted.
4. Press the DOWN button to highlight Alarm Setpoints. Press the SELECT button.
5. Press the DOWN button to highlight Low Alarm Setpoint.
6. Press the INC or DEC buttons to change the setting.
7. Press the BACK button to return to the Edit Configuration screen, or press the HOME button to exit. The new settings are saved.

16.7.5 Door Ajar Alarm
The Door Ajar Timeout specifies longest time the refrigerator door can be open before the alarm activates. If the time elapsed since the last door opening is greater than or equal to this value, the alarm activates.
► Default delay setting is three minutes
► Setting can be changed from 0 minutes to 60 minutes

Change the alarm delay:
1. Press the MAIN button.
2. Press the DOWN button to highlight Edit Configuration. Press the SELECT button.
3. Enter the password when prompted.
4. Press the DOWN button to highlight Alarm Setpoints. Press the SELECT button.
5. Press the DOWN button to highlight Door Ajar Timeout.
6. Press the INC or DEC buttons to change the setting.
7. Press the BACK button to return to the Edit Configuration screen, or press the HOME button to exit. The new settings are saved.

16.7.6 Power Failure Alarm
The Power Failure Timeout specifies longest time the refrigerator can be without AC power before the alarm activates. If the time elapsed since the last power failure is greater than or equal to this value, the alarm activates.
► Default delay setting is three minutes
► Setting can be changed from 0 minutes to 60 minutes

Change the alarm delay:
1. Press the MAIN button.
2. Press the DOWN button to highlight Edit Configuration. Press the SELECT button.
3. Enter the password when prompted.
4. Press the DOWN button to highlight Alarm Setpoints. Press the SELECT button.
5. Press the DOWN button to highlight Power Failure Timeout.
6. Press the INC or DEC buttons to change the setting.
16.7.7 Chart Paper Alarm

The default setting for the chart paper timer is Enabled. One sheet of chart paper records temperatures continuously for seven days. The timer activates an alarm 6.5 days from when the timer is reset. The timer period cannot be changed.

NOTE ► Available options are Enabled, Disabled, and Reset.
► Enabling the timer also resets the timer.

Change the setting:
1. Press the MAIN button.
2. Press the DOWN button to highlight Edit Configuration. Press the SELECT button.
3. Enter the password when prompted.
4. Press the DOWN button to highlight System Options. Press the SELECT button.
5. Press the DOWN button to highlight Chart Paper Timer.
6. Press the INC or DEC buttons to select Enabled, Disabled, or Reset.
7. Do one of the following:
   ► If Enabled or Disabled is selected, press the BACK button to return to the System Options screen, or press the HOME button to exit. The new setting is saved.
   ► If Reset is selected:
      a. Press the DOWN button.
      b. Press the PAPER-CHANGED button. The System Options screen appears with the Chart Paper Timer set to Enabled.
8. Press the BACK button to return to the System Options screen, or press the HOME button to exit. The new setting is saved.
16.8 Test Alarms
Test alarms to ensure they are working correctly. The refrigerator has alarms for chamber temperature, compressor temperature, door open (time), no battery, and power failure.

**NOTICE** Before testing alarms, protect items in the refrigerator from extended exposure to adverse temperature.

16.8.1 Manual Chamber Alarm Test

**NOTICE** Before testing alarms, protect items in refrigerator from extended exposure to adverse temperature.

**IMPORTANT** Perform the low alarm test before the high alarm test to control the temperature more closely and complete the testing more quickly.

**Obtain:**
- (2) 8 oz. (250 mL) glass half-full of chilled water
- (1) glass filled with crushed ice
- (1) 8 oz. (250 mL) glass half-full of warm water

**NOTICE** Temperature probes are fragile; handle with care.

**Test the low alarm:**
1. Identify setting for low alarm setpoint.
2. Remove chamber temperature probe from bottle.
3. Immerse probe in chilled water.
4. While stirring probe in chilled water, add approximately one teaspoon (5 mL) of ice every 20 seconds. Ensure probe is at the bottom of the glass.
5. When low temperature alarm activates, note the temperature on the Horizon Series display.

**Test the high alarm:**
1. Identify setting for high alarm setpoint.
2. While stirring probe in chilled water, add warm water so temperature increases 0.5 °C per minute.
3. When high temperature alarm activates, note the temperature on the Horizon Series display.
4. Remove probe from warm water.
5. Place temperature probe in probe bottle, immersing it at least 2" (50 mm).
16.8.2 Power Failure Alarm Test

NOTE ► During a power failure, the power failure alarm activates and the batteries provide power to the monitoring system.
► If AC power fails, the backup batteries will allow for continued temperature display.
► If the backup batteries fail, the temperature is not displayed.
► When power is restored, the monitoring system resumes data display.

1 Confirm the refrigerator is connected to AC power.
2 Ensure the monitoring system backup batteries are installed.
3 Change Power Failure Timeout setting to 0 minutes.
   a Press the MAIN button.
   b Press the DOWN button to highlight Edit Configuration. Press the SELECT button.
   c Enter the password when prompted.
   d Press the DOWN button to highlight Alarm Setpoints. Press the SELECT button.
   e Press the DOWN button to highlight Power Failure Timeout.
   f Press the DEC button to change the setting to 0.
4 Disconnect the refrigerator from AC power. Power failure alarm will activate immediately.
5 Reconnect the refrigerator to AC power. Power failure alarm will clear and audible alarm will cease.
6 Change the Power Failure Timeout setting to the original setting.

16.8.3 Door Ajar Alarm Test

1 Change Door Ajar Timeout setting to 0 minutes:
   a Press the MAIN button.
   b Press the DOWN button to highlight Edit Configuration. Press the SELECT button.
   c Enter the password when prompted.
   d Press the DOWN button to highlight Alarm Setpoints. Press the SELECT button.
   e Press the DOWN button to highlight Door Ajar Timeout.
   f Press the DEC button to change the setting to 0.
   g Press the BACK button to return to the Edit Configuration screen, or press the HOME button to exit. New settings are saved.
2 Open the door. Door ajar alarm will activate immediately.
3 Close the door. Door ajar alarm will clear and audible alarm will cease.
4 Change the Door Ajar Timeout setting to the original setting.
16.9 Additional System Settings

16.9.1 Screen Contrast

The screen contrast can be changed for easier viewing.

**NOTE**

► During an AC power failure, the screen backlight is not illuminated to conserve backup battery power.
► During an AC power failure, the screen contrast cannot be changed.

Change screen contrast:
1. On the HOME screen, press the third button from the left to make the text appear lighter.
2. On the HOME screen, press the second button from the left to make the text appear darker.

16.9.2 Date and Time

The Date Format setting controls the order in which the month (mm) and day (dd) are displayed.

► Month is a 2-digit number (01-12)
► Day is a 2-digit number (01-31)
► Default date format is mm/dd/yyyy

The Clock Mode setting controls whether the time is displayed in a 12-hour or 24-hour format.

► When using the 12-hour format, AM or PM must be specified
► Default setting is 12-hour

Change date and time settings:
1. Press the MAIN button.
2. Press the DOWN button to highlight Edit Configuration. Press the SELECT button.
3. Enter the password when prompted.
4. Press the DOWN button to highlight Set Date & Time. Press the SELECT button.
5. Press the UP or DOWN buttons to select the date and time settings to change.
6. Press the INC or DEC buttons to change the setting.
7. Press the BACK button to return to the Edit Configuration screen, or press the HOME button to exit.

The new settings are saved.

16.9.3 Display Language

The Horizon Series monitoring system stores two languages. English is the default language. If a different language is desired, it must be loaded from the flash memory card. If a flash memory card is not included with the refrigerator, the languages may have been loaded to the Horizon Series monitoring system prior to shipment.

To obtain a flash memory card to load an alternate language, contact Helmer Technical Service.

**NOTE** Each time the refrigerator is powered on, the Horizon Series monitoring system display language must be selected.

Set the display language on power-on:
1. Connect the refrigerator to AC power.
2. Install the monitoring system battery that is included in the accessory package.
   ► The refrigerator powers on and the Horizon Series monitoring system will display the System Options screen.
3. Press the INC or DEC buttons to select the desired language. Press the SELECT button.
4. Press the HOME button to return to the HOME screen.
5. If a temperature alarm sounds, press the MUTE button.

**Change the display language:**
1. Press the MAIN button.
2. Press the DOWN button to highlight Edit Configuration. Press the SELECT button.
3. Enter the password when prompted.
4. Press the DOWN button to highlight System Options. Press the SELECT button.
5. Press the UP or DOWN buttons to select Language. Press the SELECT button.
6. Press the INC or DEC buttons to select the desired language.
7. Press the BACK button to return to the System Options screen, or press the HOME button to exit. The new settings are saved.

**16.9.4 Temperature Units**
Available options are Celsius (°C) or Fahrenheit (°F). The default temperature unit is Celsius.

**Change temperature units:**
1. Press the MAIN button.
2. Press the DOWN button to highlight Edit Configuration. Press the SELECT button.
3. Enter the password when prompted.
4. Press the DOWN button to highlight System Options. Press the SELECT button.
5. Press the DOWN button to highlight Temperature Units.
6. Press the INC or DEC buttons to select the desired temperature units.
7. Press the BACK button to return to the Edit Configuration screen, or press the HOME button to exit. The new setting is saved.

**16.10 Upgrade System Firmware**
Helmer may occasionally issue updates for the Horizon Series monitoring system firmware. Follow upgrade instructions included with the firmware update.

**16.11 Reset the Horizon Series Monitoring System**
1. Remove 1 battery from the monitoring system backup battery holder.
2. Disconnect the refrigerator from AC power.
3. Reconnect the refrigerator to AC power.
4. Reinstall the battery in the monitoring system backup battery holder.

**16.12 View Manufacturer and Product Information**
1. Press the MAIN button.
2. Press the INC or DEC buttons to select the Product/Company Information option. Press the SELECT button.
   - Manufacturer contact information appears.
   - Software version appears.
Temperature Controller Setpoints

Temperature controller display and buttons.

The temperature controller is located in the electrical box on the rear of the refrigerator. Temperature controller setpoints are programmed at the factory. Setpoints can be viewed and changed through the temperature controller. Parameter values reside in four program levels.

View or change parameter values:

**NOTICE**
Changing parameter values affects refrigerator operation. Do not change parameter values unless instructed by Helmer Technical Service.

**NOTE**
- To change the value for a parameter, first enter the program mode for that level.
- When there is no interaction for 60 seconds, the temperature controller exits program mode.

1. Enter Level 1 program mode:
   a. Press and hold the **UP** and **DOWN** buttons simultaneously for approximately three seconds.
   b. “tunE” and “oFF” flash on the display.
   c. The temperature controller is now in Level 1 program mode.

2. Select the parameter to be changed:
   a. Press and release the **UP** or **DOWN** buttons until the desired parameter flashes on the display.
   b. To access Level 2 or Level 3 parameters, select the “LEVL” parameter.

3. Change a parameter value:
   a. Press and hold the * button.
   b. Press the **UP** or **DOWN** buttons to change the parameter value.
   c. To access Level 2 parameters, change the value for the “LEVL” parameter to 2.
   d. To access Level 3 parameters, change the value for the “LEVL” parameter to 3.

4. Release all buttons to exit the parameter. New settings are saved.
   - If the “LEVL” parameter value is changed, the temperature controller returns to the selected program level.

5. Repeat steps 2 through 4 to access another program level, or to view or change parameter values in the selected level.

6. Access Level 4 parameters:
   a. Navigate to Level 3 program mode.
   b. Select the “UEr” parameter.
   c. Press and hold the **UP** and **DOWN** buttons simultaneously for approximately 10 seconds.
   d. The “LOCK” parameter flashes on the display.

7. Exit program mode:
   a. Press and hold the **UP** and **DOWN** arrow buttons simultaneously for approximately three seconds, or
   b. the current chamber temperature is displayed.
### Level 1 Parameters and Values

**NOTE**
- Parameters are listed in order of appearance.
- The temperature controller is programmed at the factory with a refrigerator setpoint of 4.0 °C.

<table>

17.5 Change the Refrigerator Setpoint

![Independent temperature controller.]

**NOTICE**
- Do not change the setpoint to a value outside the temperature control range.
- Parameter values are factory-preset and should not be changed unless directed by Helmer Technical Service.

**NOTE**
- Default setpoint varies for each refrigerator.
- Setpoint is adjusted to achieve an average chamber temperature of 4.0 °C.
- The reference temperature displayed on the temperature controller may not be the same as the temperature displayed on the Horizon Series monitor.
- Allow the temperature to stabilize for 10 minutes prior to changing the setpoint again.

1. Observe the average chamber temperature displayed on the Horizon Series monitoring system, after the monitoring system probe has been calibrated.
2. Determine how much the refrigerator setpoint will be changed.

**EXAMPLE**
- Average observed temperature is 3.5 °C
- Desired average temperature is 4.0 °C
- Current setpoint is 6.0 °C
- Adjust setpoint to 6.3 °C

3. Access the setpoint adjustment function:
   a. Press and hold the ★ button.
   - The controller displays current setpoint value.
4. Change the setpoint by the setpoint adjustment value:
   a. Press and hold the ★ button.
   b. Press the **UP** or **DOWN** buttons to increase or decrease setpoint in increments of 0.1 °C.
5. Release all buttons to exit the setpoint parameter. New settings are saved.
17.6 Change the Hysteresis Value
► Default setpoint for is 4.0 °C
► Allowable temperature variance on each side of the refrigerator setpoint

⚠️ NOTICE Hysteresis is factory-preset and should not be changed unless directed by Helmer Technical Service.

18 Maintenance

⚠️ NOTICE ► Before performing maintenance, protect items in refrigerator from extended exposure to adverse temperature.
► Allow refrigerator temperature to stabilize at setpoint after performing service or after extended door opening.

NOTE Refer to the operation manual for the preventive maintenance schedule.

18.1 Recharge Refrigerant

⚠️ CAUTION ► Review all safety instructions prior to recharging refrigerant. Refer to chapter 2 (Safety).
► Maintenance should only be performed by trained refrigeration technicians.

⚠️ NOTICE Use only non-CFC R-134A refrigerant.

Full initial refrigerant charge varies by model and power requirements, which can be found on the product specification label.

<table>
<thead>
<tr>

<td>20.0 oz. (567 g)</td>
</tr>
</tbody>
</table>

Obtain:
► Refrigerant
► Calibrated pressure gauge (0 psi to 25 psi (0 kPa to 175 kPa))

Add refrigerant:
1 Attach pressure gauge to the fittings on the refrigeration lines.
2 Monitor the low side (suction) pressure through a full compressor cycle.
3 Measure the pressure at the end of the next cycle, immediately before the compressor stops.

NOTE Pressure varies depending on ambient air temperature.

4 Add refrigerant. Check the pressure on the low side.
   ► Low side = 16 psi to 18 psi (110 kPa to 125 kPa)
5 Remove pressure gauge.
18.2 Test Monitoring System Backup Batteries

The Horizon Series monitoring system does not have visual indicators for battery charge level. If the batteries deplete to a particular voltage output, the batteries will not provide power to the monitoring system.

**Test backup batteries:**

1. Disconnect the refrigerator from AC power.
   - Screen should continue to display information without backlight.
   - If the display is blank, replace batteries.
2. Reconnect the refrigerator to AC power.

18.3 Replace Monitoring System Backup Batteries

On the top of the freezer, remove six batteries and replace with six new batteries.

**NOTICE** When installing replacement batteries, use only batteries which meet the specifications outlined in chapter 18.7 (Supplies).

18.4 Replace the Fluorescent Lamps

1. Disconnect the refrigerator from AC power. Remove one battery from the monitoring system backup battery holder.
2. Single-door refrigerators: Remove drawers, shelves, baskets, and slides on the right side of the chamber.
3. Press short side of diffuser and unsnap it to remove from the light base.
4. Rotate defective light bulb and remove from the sockets.
5. Insert new light bulb into the sockets and rotate to lock into place.
6. Snap diffuser into the light base.
7. Reinstall the battery in the monitoring system backup battery holder. Reconnect the refrigerator to AC power.
8. Single-door refrigerators: Replace drawers, shelves, baskets, and slides.
9. Press the **MUTE** button to disable the high temperature alarm while refrigerator reaches operating temperature.

18.5 Clean the Refrigerator

18.5.1 Condenser Grill

In environments where refrigerator is exposed to excessive lint or dust, condenser grill may require cleaning more frequently than stated in preventive maintenance schedule.

Clean the condenser grill using a soft brush and a vacuum cleaner.

18.5.2 Exterior

Clean exterior surfaces with soft cotton cloth and non-abrasive liquid cleaner.

18.5.3 Interior

Clean painted surfaces with mild detergent. Clean stainless steel surfaces with a general-purpose laboratory cleaner suitable for stainless steel.

18.5.4 Door Gaskets

Clean with soft cloth and mild soap and water solution.
18.5.5 Clean and Refill Probe Bottle

NOTE A kit that includes a probe bottle and glycerin is available from Helmer.

Obtain:
► Fresh water-bleach solution (not provided)
  ► 1:9 ratio of bleach to water
  ► Bleach is 5% solution of commercial sodium hypochlorite (NaOCl)
  ► Equivalent oxidizing cleaner/disinfectant approved by your organization may be substituted
► 4 oz. (120 mL) of product simulation solution per bottle
  ► 10:1 ratio of water to glycerin

Clean and refill bottle:
1. Remove probe from bottle.
2. Remove bottle from bracket.
3. Clean bottle with water-bleach solution.
4. Fill bottle with 4 oz. (120 mL) of product simulation solution.
5. Cap bottle tightly to minimize evaporation.
6. Place bottle in bracket.
7. Replace probe, immersing at least 2” (50 mm).

18.6 Unit Cooler Cover Removal and Installation

If unit cooler cover is not removed as detailed in this procedure the drain port may be damaged. Improper drainage may result in excessive icing and refrigerator’s inability to maintain temperature.

Required tools:
► 5/16" socket wrench
► Tool to push putty away from the drain hose

A
B
C

Drain line and hose.

<table>
<thead>
<tr>

<tr>
<td>B</td>
<td>Drain port</td>
</tr>
<tr>
<td>C</td>
<td>Drain hose</td>
</tr>
</tbody>
</table>
18.6.1 Remove the Unit Cooler Cover

**WARNING** Disconnect the refrigerator from AC power when removing the unit cooler.

**CAUTION** The condensate evaporator and water evaporation tray are hot.

1. Disconnect the refrigerator from AC power. Remove one battery from the monitoring system backup battery holder.
2. Remove top drawer, basket, or shelf from the chamber.
3. On the back of the camber, peel putty back to expose drain hose (C).
4. Remove drain hose from unit cooler drain port (B).
   a. Pull drain hose downward to separate from unit cooler.
   b. Twist drain hose while pulling to assist in removal.
5. Push the drain hose (C) out through rear of chamber.
6. Remove the unit cooler cover.
   a. Hold unit cooler cover in place to prevent it from dropping.
   b. Use the socket wrench to remove four screws securing the unit cooler cover.
   c. Carefully lower unit cooler cover to avoid damage to the fan wiring.

18.6.2 Install the Unit Cooler Cover

1. Verify unit cooler wiring is connected and routed correctly.
   a. Wiring should be routed above copper tube inside the unit cooler.
   b. Reconnect wires if they have separated.
2. Attach unit cooler cover.
   a. Lift unit cooler cover into place.
   b. Front edge of the cover should be behind the unit cooler case.
   c. Use the socket wrench to install four screws to secure the unit cooler cover.
3. Insert the drain hose through hole in the refrigerator.
   a. Push drain hose upward, toward the unit cooler drain port.
   b. In the chamber, push drain hose onto unit cooler drain port.
4. On the back of the chamber, press putty around the drain hose.
5. Reinstall the top drawer, shelf, or basket.
6. Reinstall the battery in the monitoring system backup battery holder. Reconnect the refrigerator to AC power.
7. Press the **Mute** button to disable the high temperature alarm while refrigerator reaches operating temperature.

18.7 Supplies

- Refrigerant: non-CFC, R-134A
- Chart paper: 220366 (52 sheets)
- Glycerin solution: 400922-1
- Fluorescent lamp: T5, 13 W
- Monitoring system batteries: (6) 1.5 V, D-cell non-rechargeable alkaline batteries (or equivalent): 715031
- Chart recorder battery (optional): (1) 9 V non-rechargeable alkaline (or equivalent): 120218
19 Troubleshooting

**CAUTION**

► Review all safety instructions prior to troubleshooting. Refer to chapter 2 (Safety).
► Troubleshooting should only be performed by trained refrigeration technicians.

## 19.1 General Operation Problems

<table>
<thead>
<tr>

**NOTICE**
The Horizon display assembly is sensitive to static electricity and can be damaged by electrostatic discharge. Use proper ESD precautions when handling the display assembly.

**NOTE**
Although the LCD display and touchpad may be replaced individually, Helmer recommends replacing the entire display assembly.

23

Product Configuration

23.1 Install Battery for Backup Power

The monitoring system has a battery system, enabling a period of continuous operation if power is lost.

Note: The monitoring system will start on battery power alone. If the refrigerator was previously not connected to AC power and the battery is connected, the monitoring system will begin running on battery power.

Battery life varies by manufacturer as well as voltage level remaining. Providing full power is available and no battery-related alarms are active, backup power for the monitoring system is available for up to two hours.

Notice: When installing replacement batteries, use only batteries which meets the specifications outlined in chapter 25.7 (Supplies).

The battery is located on the top of the refrigerator, behind the monitoring system. For 111 models, a service cover covers the components and an access panel provides access to the monitoring system backup battery.

Monitoring system backup battery.

Monitoring system battery is included in the accessory package. Install and connect the battery to provide monitoring system with backup power in the event of an AC power failure.
23.2 External Monitoring Devices

CAUTION ► The interface on the remote alarm monitoring system is intended for connection to the end user’s central alarm system(s) that uses normally-open or normally-closed dry contacts.

► If an external power supply exceeding 30 V (RMS) or 60 V (DC) is connected to the remote alarm monitoring system’s circuit, the remote alarm will not function properly; may be damaged; or may result in injury to the user.

NOTE In the event of a power failure, the power failure alarm condition is transmitted through the remote alarm contacts.

The remote alarm interface is a relay switch with three terminals:

► Common (COM)
► Normally Open (NO)
► Normally Closed (NC)

Terminals are dry contacts and do not supply voltage. Interface circuit is either normally open or normally closed, depending on terminals used. Requirements for your alarm system determine which alarm wires must connect to terminals.

► 0.25 A at 30 V (RMS); 0.25 A at 60 V (DC)

23.2.1 Connect to Remote Alarm Interface

1 Disconnect AC power from the refrigerator. Disconnect the monitoring system backup battery.
2 On the electrical box, locate the remote alarm terminals.
3 Connect remote alarm wires to appropriate terminals, according to requirements for your alarm system.
4 Use a cable tie to relieve strain on alarm wires (as necessary).
5 Reconnect the refrigerator to AC power. Reconnect the monitoring system backup battery.
6 Press the MUTE button to disable the high temperature alarm while refrigerator reaches operating temperature.
23.3 Move Drawers, Shelves, and Baskets

Storage features.

CAUTION
► Keep hands away from pinch points when closing the door.
► Before moving drawers, ensure they are completely empty for safe lifting.
► Maximum basket, drawer, or shelf load is 100 lbs (46 kg).

NOTICE
Before moving storage components, protect stored items in refrigerator from extended exposure to adverse temperature.

Remove a drawer or basket
1. Pull drawer or basket out until it stops.
2. On the right rail, locate the release tab and press downward.
3. While holding the right release tab downward, locate the release tab on the left rail and press upward.
4. Pull drawer or basket free of the slides.

Install a drawer or basket
1. Align end guides on drawer or basket with the slides.
2. Gently push drawer or basket into chamber until it stops.
3. Pull drawer or basket out until it stops; check for smooth operation.

Remove a shelf
1. With one hand, lift front edge of the shelf from the front brackets.
2. With the other hand, reach under the shelf and bump rear edge of the shelf upward to disengage rear brackets.

Install a shelf
1. Insert shelf into chamber, placing it on brackets.
2. Gently bump rear edge of the shelf downward to engage brackets.
3. Pulling shelf forward gently; shelf should not disengage from rear brackets.
23.4 Move Slides and Brackets

Remove drawer slides
1. Using a screwdriver, remove front bracket retainers.
2. Tap front brackets upward to disengage standards.
3. Remove slides from standards.

Install drawer slides
1. Insert slides into standard at appropriate height.
2. Tap front brackets downward to engage standards.
3. Using a screwdriver, install front bracket retainers.

Remove shelf brackets
1. Using a screwdriver, remove front bracket retainers.
2. Tap front brackets upward to disengage standards.
3. Remove front brackets from standards.

Install shelf brackets
1. Insert front brackets into standard at appropriate height.
2. Tap front brackets downward to engage standards.
3. Using a screwdriver, install front bracket retainers.

23.5 Optional Adapter Kits for Medication Dispensing Locks
Contact Helmer Technical Service or your distributor for service documentation pertaining to medication dispensing locks.

24 Settings
Through the Laboratory combined monitor and controller, current settings may be viewed and changed.

⚠️ NOTICE
► Control Sensor Offset and Hysteresis settings are factory-preset and should not be changed unless directed by Helmer Technical Service.
► Changing temperature settings affects operation of the refrigerator. Do not change settings unless instructed by Helmer Technical Service.

</tbody>
</table>

**NOTE**

The Alarm Disable key switch disables all audible alarms. This switch does not affect alarm lamps or signals sent through the remote alarm interface.
24.2 Refrigerator Setpoint

NOTE Default setpoint is 4.0 °C.

Change the setpoint if:
► Your organization requires a chamber temperature other than 4.0 °C.
► The normal chamber temperature is too high or low (after completing preventive maintenance and applicable troubleshooting tasks).

Confirm:
► Refrigerator has been placed per location requirements in the operation manual.
► Preventive maintenance has been completed per operation manual.
► Troubleshooting items associated with chamber temperature have been reviewed (if necessary).

Change setpoint.
1 Determine the change in value to reach desired setpoint. Adjustment should be the difference between current setpoint and new setpoint.

EXAMPLE
► Current setpoint is 4.0 °C
► Target setpoint is 5.0 °C
► Setpoint adjustment value is +1.0 °C

2 On the monitoring system, press and release SEL to change to Control mode. CONTROL lamp will illuminate.
3 Press and hold SET to display the reference temperature.
4 Hold SET and press Up Arrow or Down Arrow as necessary to set the adjustment value determined in step 2.
5 Release all buttons; the setpoint is changed.
6 Press and release SEL to return to Monitor mode. MONITOR lamp will illuminate.

24.3 Temperature Alarm Setpoints

View setpoints:
1 Hold Up Arrow and Down Arrow for three seconds. MONITOR lamp will flash to indicate entry into program mode.
2 Press SEL until desired setting appears.
3 Observe the setting.
4 To view another setting, press SEL again (optional).
5 Hold Up Arrow and Down Arrow for three seconds. MONITOR lamp stops flashing to indicate exit from program mode.

24.3.1 High Temperature Alarm
► Specifies the temperature at which the High Temperature Alarm activates.
► Default setpoint is 5.5 °C.
► Setpoint can be changed from -40.0 °C to +25.0 °C.

Change the setpoint:
1 Hold **Up Arrow** and **Down Arrow** for three seconds. MONITOR lamp will flash to indicate entry into program mode.
2 Press **SEL** until HIGH TEMP and MONITOR lamps flash.
3 Hold **SET**, then press **Up Arrow** or **Down Arrow** to change the setpoint.
4 Release **SET** button.
5 Hold **Up Arrow** and **Down Arrow** for three seconds. MONITOR lamp stops flashing to indicate exit from program mode. New settings are saved.

24.3.2 Low Temperature Alarm
► Specifies the temperature at which the Low Temperature Alarm activates.
► Default setpoint for HHB (blood bank) models is 1.5 °C.
► Default setpoint for HLR and HPR (laboratory and pharmacy) models is 2.0 °C.
► Setpoint can be changed from -40.0 °C to +25.0 °C.

Change the setpoint:
1 Hold **Up Arrow** and **Down Arrow** for three seconds. MONITOR lamp will flash to indicate entry into program mode.
2 Press **SEL** until LOW TEMP and MONITOR lamps flash.
3 Hold **SET**, then press **Up Arrow** or **Down Arrow** to change the setpoint.
4 Release **SET** button.
5 Hold **Up Arrow** and **Down Arrow** for three seconds. MONITOR lamp stops flashing to indicate exit from program mode. New settings are saved.

24.4 Temperature Calibration Setpoints

View setpoints:
1 Hold **Up Arrow** and **Down Arrow** for three seconds. MONITOR lamp will flash to indicate entry into program mode.
2 Press **SEL** until desired setting appears.
3 Observe the setting.
4 To view another setting, press **SEL** again (optional).
5 Hold **Up Arrow** and **Down Arrow** for three seconds. MONITOR lamp stops flashing to indicate exit from program mode.

<table>

</tr>
</tbody>
</table>
Monitor Offset

► Adjust if temperature displayed on the monitor does not match measured chamber temperature.
► Value is factory-set to match an independent thermometer.
► Value can be changed from -10.0 °C to +10.0 °C.

NOTE
► If the variance is within acceptable limits, changing the offset value is optional.
► Probes in the bottle are connected to the monitoring system and sense chamber temperature. These probes do not affect refrigerator setpoint.

Obtain:
► Independent thermometer, calibrated and traceable per national standards.
► Tape, to attach thermometer to temperature probe.

Measure the chamber temperature:
1 Remove the probe from the probe bottle.
2 Unscrew the cap from the bottle.
3 Tape the thermometer to the temperature probe, and place them in the bottle. The probe and thermometer should be immersed at least 2" (50 mm).
4 Close the door and allow the chamber temperature to stabilize for 10 minutes.
5 Observe and note the thermometer temperature.
6 Remove thermometer and probe from bottle and remove tape.
7 Replace bottle cap, ensuring a tight fit.
8 Place the probe in bottle, immersing at least 2" (50 mm).

Enter the new offset value:
► Lower the offset value to lower the displayed monitor temperature.
► Raise the offset value to raise the displayed monitor temperature.

EXAMPLE
► Measured temperature (at the probe bottle) is 4.0 °C
► Displayed temperature is 4.5 °C
► Offset adjustment value is -0.5 °C

1 Hold Up Arrow and Down Arrow for three seconds. MONITOR lamp will flash to indicate entry into program mode.
2 Press SEL until only the MONITOR lamp flashes.
3 Hold SET, then press Up Arrow or Down Arrow to change the setpoint.
4 Release SET button.
5 Hold Up Arrow and Down Arrow for three seconds. MONITOR lamp stops flashing to indicate exit from program mode. New settings are saved.
24.4.2 Control Sensor Offset

The temperature controller senses chamber temperature through a probe in the unit cooler. The chamber setpoint typically varies from the measured temperature, so an offset value is used by the control system to compensate for the difference.

► Value is factory-preset and varies for each unit
► Offset value can be changed from -10.0 °C to +10.0 °C

⚠️ NOTICE ♦ Control Sensor Offset is factory-preset and should not be changed unless directed by Helmer Technical Service.

24.4.3 Hysteresis

► Default setpoint for HLR111 and HPR111 models is 0.8 °C.
► Default setpoint for HLR/HPR 120, 125, 245, 256 models, and all HHB models is 2.0 °C.
► Allowable temperature variance on each side of the refrigerator setpoint.

⚠️ NOTICE ♦ Hysteresis is factory-preset and should not be changed unless directed by Helmer Technical Service.

24.5 Test Alarms

Test alarms to ensure they are working correctly. The refrigerator has alarms for chamber temperature, power failure, and door open (time).

24.5.1 Chamber Temperature Alarm

IMPORTANT ♦ Perform the low alarm test before the high alarm test to control the temperature more closely and complete the testing more quickly.

Obtain:

► (1) 8 oz. (250 mL) glass half-full of chilled water.
► (1) glass filled with crushed ice.
► (1) 8 oz. (250 mL) glass half-full of warm water.

⚠️ NOTICE ♦ Temperature probes are fragile; handle with care.

Test the low alarm:
1 Identify setting for low alarm setpoint.
2 Remove chamber temperature probe from bottle.
3 Immerse probe in chilled water.
4 While stirring probe in chilled water, add approximately one teaspoon (5 mL) of ice every 20 seconds. Ensure probe is at the bottom of the glass.
5 When low temperature alarm activates, note the temperature on the monitoring system display.

Test the high alarm:
1 Identify setting for high alarm setpoint.
2 While stirring probe in chilled water, add warm water so temperature increases 0.5 °C per minute.
3 When high temperature alarm activates, note the temperature on the monitoring system display.
4 Remove probe from warm water.
5 Place temperature probe in probe bottle, immersing it at least 2” (50 mm).
24.5.2 Power Failure Alarm
1 Disconnect the refrigerator from AC power. Audible power failure alarm will activate immediately and “PoFF” (power off) will appear on the display.
2 Reconnect the refrigerator to AC power. Audible power failure alarm will cease and “PoFF” will clear from the display.

24.5.3 Door Open Alarm
► Factory-set to three minutes.
► Value can not be changed.

NOTICE Before testing alarms, protect items in refrigerator from extended exposure to adverse temperature.

Test the alarm:
1 Open refrigerator door and note the time.
2 After three minutes, audible alarm will activate and DOOR ALARM lamp will flash.
3 Close refrigerator door. Audible door open alarm will cease and DOOR ALARM lamp will stop flashing.
25 Maintenance

**NOTICE**
- Before performing maintenance, protect items in refrigerator from extended exposure to adverse temperature.
- Allow refrigerator temperature to stabilize at setpoint after performing service or after extended door opening.

**NOTE**
Refer to the operation manual for the preventive maintenance schedule.

### 25.1 Recharge Refrigerant

**CAUTION**
- Review all safety instructions prior to recharging refrigerant. Refer to chapter 2 (Safety).
- Maintenance should only be performed by trained refrigeration technicians.

**NOTICE**
Use only non-CFC R-134A refrigerant.

Full initial refrigerant charge varies by model and power requirements, which can be found on the product specification label.

**Obtain:**
- Refrigerant
- Calibrated pressure gauge (0 psi to 25 psi (0 kPa to 175 kPa))

**Add refrigerant:**
1. Attach pressure gauge to the fittings on the refrigeration lines.
2. Monitor the low side (suction) pressure through a full compressor cycle.
3. Measure the pressure at the end of the next cycle, immediately before the compressor stops.

**NOTE**
Pressure varies depending on ambient air temperature.

4. Add refrigerant. Check the pressure on the low side.
   - Low side = 16 psi to 18 psi (110 kPa to 125 kPa)
5. Remove pressure gauge.
25.2 Test Monitoring System Backup Battery

The monitoring system does not indicate the charge level of the battery. Regularly test the battery. Replace battery if the test fails or if the battery has been in use for one year.

Test backup battery:
1. Disconnect the refrigerator from AC power.
   - Screen should continue to display information without backlight.
   - If the display is blank, replace battery.
2. Reconnect the refrigerator to AC power.

25.3 Replace Monitoring system Backup Battery

On the top of the refrigerator, remove the battery and replace with a new battery.

**NOTICE** When installing a replacement battery, use only a battery which meets the specifications outlined in chapter 25.7 (Supplies).

25.4 Replace the Fluorescent Lamps

1. Disconnect the refrigerator from AC power. Remove one battery from the monitoring system backup battery holder.
2. Single-door refrigerators: Remove drawers, shelves, baskets, and slides on the right side of the chamber.
3. Press short side of diffuser and unsnap it to remove from the light base.
4. Rotate defective light bulb and remove from the sockets.
5. Insert new light bulb into the sockets and rotate to lock into place.
6. Snap diffuser into the light base.
7. Reinstall the battery in the monitoring system backup battery holder. Reconnect the refrigerator to AC power.
8. Single-door refrigerators: Replace drawers, shelves, baskets, and slides.
9. Press the MUTE button to disable the high temperature alarm while refrigerator reaches operating temperature.

25.5 Clean the Refrigerator

25.5.1 Condenser Grill

In environments where refrigerator is exposed to excessive lint or dust, condenser grill may require cleaning more frequently than stated in preventive maintenance schedule.

Clean the condenser grill using a soft brush and a vacuum cleaner.

25.5.2 Exterior

Clean exterior surfaces with soft cotton cloth and non-abrasive liquid cleaner.

25.5.3 Interior

Clean painted surfaces with mild detergent. Clean stainless steel surfaces with a general-purpose laboratory cleaner suitable for stainless steel.

25.5.4 Door Gaskets

Clean with soft cloth and mild soap and water solution.
25.5.5 Clean and Refill Probe Bottle

NOTE A kit that includes a probe bottle and glycerin is available from Helmer.

Obtain:
► Fresh water-bleach solution (not provided)
  ► 1:9 ratio of bleach to water
  ► Bleach is 5% solution of commercial sodium hypochlorite (NaOCl)
  ► Equivalent oxidizing cleaner/disinfectant approved by your organization may be substituted
► 4 oz. (120 mL) of product simulation solution per bottle
  ► 10:1 ratio of water to glycerin

Clean and refill bottle:
1 Remove probe from bottle.
2 Remove bottle from bracket.
3 Clean bottle with water-bleach solution.
4 Fill bottle with 4 oz. (120 mL) of product simulation solution.
5 Cap bottle tightly to minimize evaporation.
6 Place bottle in bracket.
7 Replace probe, immersing at least 2” (50 mm).

25.6 Unit Cooler Cover Removal and Installation

If unit cooler cover is not removed as detailed in this procedure the drain port may be damaged. Improper drainage may result in excessive icing and refrigerator’s inability to maintain temperature.

Required tools:
► 5/16” socket wrench
► Tool to push putty away from the drain hose

<table>
<thead>

</tr>
<tr>
<td>C</td>
<td>Drain hose</td>
</tr>
</tbody>
</table>
Remove the Unit Cooler Cover

WARNING Disconnect the refrigerator from AC power when removing the unit cooler.

CAUTION The condensate evaporator and water evaporation tray are hot.

1. Disconnect the refrigerator from AC power. Remove one battery from the monitoring system backup battery holder.
2. Remove top drawer, basket, or shelf from the chamber.
3. On the back of the chamber, peel putty back to expose drain hose (C).
4. Remove drain hose from unit cooler drain port (B).
   a. Pull drain hose downward to separate from unit cooler.
   b. Twist drain hose while pulling to assist in removal.
5. Push the drain hose (C) out through rear of chamber.
6. Remove the unit cooler cover.
   a. Hold unit cooler cover in place to prevent it from dropping.
   b. Use the socket wrench to remove four screws securing the unit cooler cover.
   c. Carefully lower unit cooler cover to avoid damage to the fan wiring.

Install the Unit Cooler Cover

1. Verify unit cooler wiring is connected and routed correctly.
   a. Wiring should be routed above copper tube inside the unit cooler.
   b. Reconnect wires if they have separated.
2. Attach unit cooler cover.
   a. Lift unit cooler cover into place.
   b. Front edge of the cover should be behind the unit cooler case.
   c. Use the socket wrench to install four screws to secure the unit cooler cover.
3. Insert the drain hose through hole in the refrigerator.
   a. Push drain hose upward, toward the unit cooler drain port.
   b. In the chamber, push drain hose onto unit cooler drain port.
4. On the back of the chamber, press putty around the drain hose.
5. Reinstall the top drawer, shelf, or basket.
6. Reinstall the battery in the monitoring system backup battery holder. Reconnect the refrigerator to AC power.
7. Press the Mute button to disable the high temperature alarm while refrigerator reaches operating temperature.

Supplies

Refrigerant: non-CFC, R-134A
Chart paper: 220366 (52 sheets)
Glycerin solution: 400922-1
Fluorescent lamp: T5, 13 W
Monitoring system battery: (1) 9 V, non-rechargeable lithium battery (or equivalent): 120399
Chart recorder battery (optional): (1) 9 V non-rechargeable alkaline (or equivalent): 120218
26 Troubleshooting

CAUTION ► Review all safety instructions prior to troubleshooting. Refer to chapter 2 (Safety).
► Troubleshooting should only be performed by trained refrigeration technicians.

26.1 General Operation Problems

<table>
<thead>
