1 About this Manual

This manual provides information on how to use the i.Series® Ultra-Low freezer. It is intended for use by end users of the freezer and authorized service technicians.

Models are indicated by a distinguishing model number that corresponds to the series, type, number of doors and capacity of the freezer. For example, “iUF124” refers to an i.Series Ultra-Low Freezer with 1 door and a capacity of 24 cu ft. This manual covers all ultra-low freezers, which may be identified singly, or by their size.

1.1 Safety Precautions and Symbols

Symbols found in this document

The following symbols are used in this manual to emphasize certain details for the user:

- **Task** Indicates procedures which need to be followed.
- **Note** Provides useful information regarding a procedure or operating technique when using Helmer Scientific products.
- **NOTICE** Advises the user against initiating an action or creating a situation which could result in damage to equipment; person injury is unlikely.
- **CAUTION** Advises the user against initiating an action or creating a situation which could result in damage to equipment or impair the quality of the products or cause minor injury.
- **WARNING** Advises the user against initiating an action or creating a situation which could result in damage to equipment and serious personal injury to a patient or the user.

Symbols found on the units

The following symbols may be found on the freezer or freezer packaging.

- **Caution: Safety hazard to operator or service technician**
- **Caution: Unlock all casters**
- **Caution: Electrocution/shock hazard**
- **Earth / ground terminal**
- **Protective earth / ground terminal**
- **Caution: Electrostatic discharge (ESD) hazard**
- **Compliance with European Union Directive WEEE 2002/96/EC applicable provisions.**
Avoiding Injury

Review safety instructions before installing, using, or maintaining the equipment.
♦ Before moving unit, remove contents from the chamber.
♦ Before moving unit, ensure door is closed and latched, and casters are unlocked and free of debris.
♦ Before moving unit, disconnect the AC power cord and secure the cord.
♦ When moving unit, use assistance from a second person.
♦ Never physically restrict any moving component.
♦ Avoid removing electrical service panels and access panels unless so instructed.
♦ Use appropriate gloves when handling cold internal components and stored inventory.
♦ Keep hands away from pinch points when closing the door.
♦ Avoid sharp edges when working inside the electrical compartment and refrigeration compartment.
♦ Ensure biological materials are stored at recommended temperatures determined by standards, literature, or good laboratory practices.
♦ Total freezer weight (including contents) is not to exceed 1400 lbs (635 kg).
♦ Use manufacturer supplied power cord only.
♦ Using the equipment in a manner not specified by Helmer may impair the protection provided by the equipment.
♦ Ensure biological materials are stored safely, in accordance with all applicable organizational, regulatory, and legal requirements.
♦ The freezer is not considered to be a storage cabinet for flammable or hazardous materials.

⚠️ CAUTION
Decontaminate parts prior to sending for service or repair. Contact Helmer or your distributor for decontamination instructions and a Return Authorization Number.

1.2 General Recommendations

Intended Use
Helmer ultra-low freezers are intended to provide a controlled temperature environment at ultra-low temperatures required for the storage of biological materials, pharmaceuticals, and reagents used in a research or clinical laboratory.
The devices referenced in this manual are intended to be operated by personnel who have procedures in place for meeting FDA, AABB, or any other applicable regulations for the processing and storage of biological materials, pharmaceuticals, and reagents.

General Use
Allow freezer to come to room temperature before switching power on.
During initial startup, the high temperature alarm may sound while the freezer reaches operating temperature.

⚠️ NOTE
This unit is not a “rapid-freezing” device. Freezing large quantities of liquid, or high-water content items, will temporarily increase the chamber temperature and will cause the compressors to operate for a prolonged period of time.

Initial Loading
Allow chamber temperature to stabilize at the setpoint before storing pre-frozen product.

Product Loading Guidelines
When loading your freezer, take care to observe the following guidelines:
♦ Never load freezers beyond capacity.
♦ Always store items within shelves.
2 Installation

2.1 Location

♦ Has a dedicated 15 A grounded circuit with dedicated single point receptacle meeting the electrical requirements listed on the product specification label.
♦ Is clear of direct sunlight, high temperature sources, and heating and air conditioning vents.
♦ Minimum 8" (203 mm) above, and minimum 4" (102 mm) behind.
♦ Meets limits specified for ambient temperature and relative humidity.

2.2 Remove Compressor Restraints

1. Using ½” socket and ½” open-end wrench, remove the hex bolt securing the compressor restraint under the high-stage compressor. Set hex bolt, washer and hex nut aside for use in installing rubber compressor foot (Qty.: 1 per compressor).
2. Lift compressor mounting plate slightly and slide restraint out.
3. Remove rubber compressor foot and metal spacer from accessories box.
4. Slide the compressor foot under the compressor mounting plate and align hole in the foot with opening in the bottom of the freezer and mounting plate.
5. Insert metal spacer in the center of rubber compressor foot.
6. Insert hex bolt through bottom of freezer and up through compressor foot and mounting plate.
7. Place washer and hex nut over the protruding hex bolt. Hand-thread hex nut.
8. Secure using torque wrench, and tighten to 78.8 in-lbs.
9. Repeat steps 1 – 8 for low-stage compressor.

Note

When removing the compressor restraint from the low-stage compressor, approach from the left side of the compressor to avoid damage to the copper tubing mounted to the floor of the refrigeration compartment.

10. Place rear panel over refrigeration compartment and align holes in panel with threaded holes in freezer.

2.3 Placement and Leveling

CAUTION

♦ To prevent tipping, ensure door is closed and latched, and casters are unlocked and free of debris before moving freezer.
♦ The freezer is extremely heavy. Helmer recommends two people work together to move the freezer.

1. Ensure all casters are unlocked and door is closed and latched.
2. Roll freezer into place and lock casters.
3. Adjust leveling feet (if installed) to ensure freezer is level.
2.4 Rear Stand-Offs

⚠️ CAUTION
The rear stand-offs include a hole to accept a threaded fastener for anchoring the freezer to a wall. The rear stand-offs do not provide a secure means to anchor the freezer to the wall that can be considered resistant to seismic events.

ℹ️ Notes
- Installation of the rear stand-offs is optional.
- Anchoring the freezer to the wall is optional.
- Hardware to anchor the freezer to the wall is not provided with the freezer. The end user is responsible for determining the best method to anchor the freezer to the wall.

🔧 Install Rear Stand-Offs

1. Align the holes in the stand-offs with the corresponding threaded holes on the back of the freezer.
2. Insert the 3/8” hex head cap screws through the holes in the stand-offs.
3. Hand-thread the cap screws into the threaded holes.
4. Using a 9/16” open-ended wrench, tighten the cap screws.

2.5 AC Power Cord Retainer

⚠️ NOTICES
- Do not position the freezer where it will prevent access to the power cord disconnect at the wall receptacle.
- Use only manufacturer supplied power cord.

🔧 Install Power Cord Retainer

1. Insert the power cord into the receptacle on rear of the cabinet.
2. Slide the retainer upward, engaging the groove in the power plug with the slot in the retainer.
3. Align the holes in the retainer with the corresponding holes on the cabinet.
4. Insert the screws with lock washers through the retainer and into the holes in the cabinet.
5. Using a #2 Phillips screwdriver, tighten the screws.
2.6 Storage Shelves

Note
Shelf clips must be installed so the horizontal section is oriented upward.

Install Shelves with Shelf Clips
1. Open the chamber door and all inner doors.
2. Install shelf clips on the shelf standards at the marked locations.
3. Beginning with the bottom shelf, insert the shelf into the chamber at an angle.
4. Rotate the shelf so it sits flat on the shelf clips.
5. Working from the bottom to the top, install the remaining shelves as described in steps 3 and 4.
6. Close the inner doors and the chamber door.

2.7 Chart Recorder (optional)

Install / Replace Chart Paper

Note
For accurate temperature reading, ensure current time is aligned with time line groove when the chart knob is fully tightened.

1. Press and hold C button. When stylus begins to move left, release button. The LED flashes.
2. When stylus stops moving, remove chart knob then move knob up and away.
3. Place chart paper on chart recorder.
4. Gently lift stylus and rotate paper so current time line corresponds to time line groove.
5. Hold chart paper in place while making sure the chart knob is fully tightened. (Failure to fully tighten the knob can result in paper slipping and losing time.)
6. Press and hold C button. When stylus begins to move right, release button.
7. Confirm stylus is marking on paper and stops at the correct temperature.
8. Calibrate chart recorder to match primary temperature if needed and close recorder door.
3  i.Series Operation

3.1  Initial Start Up

1. Plug the power cord into a 15 A grounded circuit with a dedicated single point receptacle.
2. Switch battery ON/OFF switch **ON**.
3. Switch AC ON/OFF switch **ON**.

Note
The Start screen is displayed when the i.C³ is powered on. The i.C³ monitoring and control system will take approximately three minutes to boot up.

![Start screen](image)

The language screen is displayed after the i.C³ is powered on. Use the Language screen to select the i.C³ display language.

![Language screens](image)

Note
English is the default language.
If an alarm sounds, temporarily mute the alarm by touching the Mute icon.

![Home screen - alarm muted](image1)

**Note**

Active alarms are displayed on the Home screen. If an alarm condition other than High Temperature occurs, refer to the service manual for troubleshooting.

### 3.2 Operation

**Notes**

- Refer to the i.C³ User Guide for Ultra-Low Freezers for complete information regarding the i.C³ User Interface.
- The i.C³ Home screen displays temperature and alarm information, and provides icons to gain access to other functions of the i.C³.
- After two minutes of inactivity, the screensaver will be displayed. To return to the Home screen, touch the screensaver.

![Home screen](image2)

![Home screensaver](image3)
3.3 Change Temperature Setpoint

**Note**
The Temperature Setpoint toggle button can be accessed from either the initial Settings screen or the Device Control Settings screen.

> Enter the Settings password. Select Temperature Setpoints. Touch minus (-) or plus (+) on spin box to change value.

**Settings screen**

**Notes**
- Default Settings password is 1234.
- Default setpoint is -80.0 °C.
3.4 Set Alarm Parameters

> Enter the Settings password. Scroll down to select Alarm Settings. Touch minus (-) or plus (+) on spin box to set each alarm parameter.

**Settings screen**

**Alarm Settings screens**

Alarm settings control the circumstances and timing of alarm condition indicators displayed on the i.C³ Home screen.
3.5 Active Alarms

3.6 Mute and Disable Active Alarms

Audible alarms may be muted by touching the Mute icon to set delay. Touching the Mute icon repeatedly will increase the Mute timer incrementally.
4 Min/Max Temperature Monitoring

The Min/Max temperature display provides the highest and lowest Primary Monitor probe temperature reading since the last system reset (power-on event) or manually-initiated reset. Touch the Reset icon to the right of the display to manually reset.

Notes

- The Min/Max temperature display can be turned on or off through Display Settings.
- Once the time reaches the maximum display of 999 hours and 60 minutes, the message will display “>999:60”, but minimum and maximum temperatures will continue to be tracked.
5  Access Control

Allows user-specific secure access to the freezer.

**Notes**

- The Supervisor PIN must be used to set up user profiles.
- The Supervisor PIN does not allow access to the unit. At least one user ID must be set up to gain access to the unit.
- The Supervisor PIN should be changed to prevent unauthorized user ID setup. The Supervisor PIN cannot be deleted.
- In the event the Supervisor PIN is unavailable, contact Helmer Technical Service to reset the Supervisor PIN.
- When setting up Access Control user IDs, ensure the key lock is in the locked position to prevent unauthorized access to the freezer.
- The keys provided with the freezer may be used to lock or unlock the exterior door.

5.1 Setup

Configure and manage multiple user-specific accounts to allow controlled access to the freezer.

**Entry into Access Control Setup**

1. Touch the Access Setup button. A numeric keypad is displayed.
2. Enter the supervisor PIN (if entering for the first time, use the factory supervisor PIN = 5625).
3. Touch to confirm. The keypad closes and the Access Control Setup screen is displayed.

**Add a user profile**

1. Touch the Add User button. An alphanumeric keyboard is displayed.
2. Enter the User ID for the new user profile.
3. Touch to store the user ID. The numeric keyboard is displayed.
4. Enter a 4-digit PIN for the new user profile.
5. Touch to store the user PIN. The User ID and PIN for the new user profile are displayed in the table.
5.2 Open Freezer with Access Control

Access Control Keypad

- Using Access Control to unlock the door
  1. Enter unique 4-digit PIN.
  2. If a valid PIN is entered, the Padlock indicator appears open and the door is unlocked.
6 Product Specifications

6.1 Operating Standards

♦ Indoor use only
♦ Altitude (maximum): 2000 m
♦ Ambient temperature range: 15 °C to 32 °C
♦ Relative humidity (maximum for ambient temperature): 80% for temperatures up to 25 °C, decreasing linearly to 53% at 32 °C
♦ Temperature control range: -50 °C to -86 °C

Note
Power conditioning (voltage boost) is an optional feature. If facility voltage is consistently at or below 195 V, voltage boost must be installed in order to protect the compressors.

CAUTION
- The interface on the remote alarm monitoring system is intended for connection to the end user’s central alarm system(s) that uses normally-open or normally-closed dry contacts.
- If an external power supply exceeding 30 V (RMS) or 60 V (DC) is connected to the remote alarm monitoring system’s circuit, the remote alarm will not function properly; may be damaged; or may result in injury to the user.

Note
Overall exterior dimensions include casters, handle, i.C3 bezel, and door hinges.

7 Compliance

7.1 Regulatory Compliance

This product is certified to applicable UL and CSA standards by a NRTL.
Sound level is less than 70 dB(A).

7.2 Electromagnetic Compliance

This device is suitable for use in a specific electromagnetic environment. The end user of this device is responsible for ensuring the device is used in compliance with the following European Union directives and standards regarding EMC (electromagnetic compliance):
EMC Directive (2004/108/EC) Standards:
♦ EN 55011:2009
♦ EN 61000-3-2:2006
♦ EN 61000-3-3:2008
♦ EN 61000-6-1:2007
8  Preventive Maintenance

Notes

- It is important to ensure that all scientific equipment is maintained regularly for optimum performance.
- These are recommended minimum requirements. Regulations for your organization or physical conditions at your facility may require maintenance items to be performed more frequently, or only be designated service personnel.

Preventive maintenance tasks should be completed according to the following schedule. Refer to the service manual and the i.C³ User Guide for detailed information on tasks.

Table 6. Preventive Maintenance Schedule

<table>
<thead>
<tr>
<th>Task</th>
<th>Frequency</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Quarterly</td>
</tr>
<tr>
<td>Verify the monitor/chamber temperature sensor accuracy. Calibrate the sensor if necessary.</td>

<td>✔</td>
</tr>
<tr>
<td>Test the Power Failure alarm (as required by your organization’s protocols).</td>
<td></td>
</tr>
<tr>
<td>Test the Door Open alarm.</td>
<td>✔</td>
</tr>
<tr>
<td>Inspect electrical components and wiring terminals in the electrical box for discoloration. Contact Helmer Technical Service if any discoloration is found.</td>
<td></td>
</tr>
<tr>
<td>Inspect and clean the condenser filter.</td>
<td>✔</td>
</tr>
<tr>
<td>Replace the i.C³ backup battery</td>
<td></td>
</tr>
<tr>
<td>Defrost and clean the chamber, exterior door gasket, and inner doors.</td>
<td></td>
</tr>
</tbody>
</table>

NOTICE

- Inspect and clean the condenser filter as directed in the maintenance schedule, or when prompted by the i.C³ control and monitoring system.
- The Clean Filter alarm monitors the condition of the air filter as a safety measure. The alarm is designed to warn if the filter media becomes clogged such that freezer operation and product integrity will be affected.
- The Clean Filter alarm could indicate a failure of the condenser fan.

Notes

- During a power failure, the backup battery provides power to the monitoring system, power failure alarm, and chart recorder (if equipped). If the backup battery is not functioning, the power failure alarm will not be activated.
- If the backup battery does not provide power to the monitoring system during the power failure alarm test, replace the battery.
- During a power failure, the Access Control lock will continue to secure the door. To access the freezer during a power failure, the override key must be used.

NOTICE

• Do not allow the storage rack to set on the top edge of a partially-open interior door when removing or replacing racks.
• To avoid damage to the interior door hinges, do not apply upward or downward force to the interior doors.
